Note: As of April 1949, Newfoundland is included.

(1) Total pulp production was revised where necessary to cover "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

(2) Totals include unspecified pulp.

(1) Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

(2) Excluding producers' interchange.

(3) Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

(4) Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December 1946.

Value of Building Permits

---

[1] The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

---

(1) Hollow blocks including fireproofing and load-bearing tile. (2) Planks and boards.

(3) Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

---

(1) Does not include Supplementary Government Payment made under Prairie Farm Assistance Act, Prairie Farm Income Act and Wheat Acreage Reduction Act.

(2) Includes total adjustment payments made by grain companies on oats and barley delivered by western producers during the period August 1 to October 21, 1947. These payments are not available on a provincial or quarterly basis.

(1) Includes imports to the end of 1947-48 while in 1948-49 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

(2) Figures of customs exports for 1945-46 and 1946-47 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1947-48 are customs exports and will be adjusted when required information is available.

(3) Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption.

(4) Includes customs exports of Canadian oatmeal and rolled oats.

---

(1) Available for January, April and August only. (2) Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date. (3) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. (4) Prior to 1941 prices were quoted on a live weight basis. (5) Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W. (6) Subject to revision.

---

(1) Does not include re-exports.

(2) This column has been revised to exclude ferro-alloys and iron ore. Exports of primary iron and steel now comprise pigs, ingots, blooms and billets, and rolling mill products.

(3) Other iron and steel has been revised to include iron ore.

(1) Australia, New Zealand, South Africa, India and Pakistan.

(2) Includes Belgium, China, Czechoslovakia, France, Netherlands, Netherlands Indies and Norway.

Source: Monthly Report; Imports for Consumption, Trade of Canada, D.B.S.

*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada. Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies. Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments".

(1) Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transactions,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

(2) Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board. *See footnote of page 106.

---

[1] The annual statistics embrace all steam railways, while monthly data refer to railways with annual operating revenues of $500,000 or over. [2] Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities. [3] For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling $29,085,087, paid in September, were not included in that month's operating expenses. Payrolls as now reported monthly are according to the new wage scale.

(1) Prior to 1941 statistics are for shipping year ended March 31. (2) Annual data are averages of nine months.

(3) Excludes Canada-United Kingdom Route.

(4) Annual data include tugs. The data of registered tonnage were revised for 1948 to cover clearings only, thus ensuring comparability with the statistics for other periods.

Public Finance Statistics

Any discussion of Canadian public finance statistics must, of necessity consider the subject under three broad headings: (a) Dominion finance, (b) Provincial finance and, (c) Municipal finance. It is one of the major functions of the Bureau of Statistics to gather and compile data on all three sections of public finance and thus present to the people of this country, through its various publications, what might be described as a "consolidated statement" of the financial position of all taxing authorities in the Dominion.

Governments, like private corporations and businesses, issue financial statements and reports in greater or lesser detail. However, as the governments themselves vary in size, organization and responsibility so also do their published reports. These, of course, are predicted upon the budgetary and accounting systems employed, and since the latter are designed primarily to conform with statutory provisions and requirements and reflect mainly governmental administration systems, or departmental responsibilities for services, the results are not homogeneously suitable to statistical needs.

While the public finance statistics published by the Bureau are based on such official reports or documents, supplemented with additional information when necessary, it must provide consistent statistics for all levels of government on a national scale. There must be a standard framework based on the common nature of similar activities, items and transactions rather than according to the numerous practices, terms and principles employed by individual governments. Common terms and definitions and uniform classifications must be applied to produce useful summations of data. These would be meaningless otherwise because of the lack of comparability in the scope and coverage of individual reports, in the accounting terms, definitions and classifications used therein, and in some instances also in the principles followed such as in accounting for the transactions of current (or income) account and capital account.

Thus while based on official reports, the statistics published by the Bureau represent a recasting of information to obtain complete coverage including all public units such as independent offices, autonomous agencies and others of a similar character which are not consolidated in the budget accounts of the governmental units proper, to correct for omissions and for deductions of revenues (or receipts) from expenditures or vice versa in the main accounts published, and to present the data according to pre-determined statistical categories.

In connection with the financial statistics of the federal government there is, of course, no difficulty of collection or compilation. The details supplied to the Bureau of Statistics annually by the Department of Finance and the Bureau publishes it together with comparative data for previous years in *The Canada Year Book*.

With regard to both provincial and municipal financial statistics the situation has been very different. Both the tremendous importance of the subject and the difficulties which would be encountered were very early recognized. The first annual report of the Dominion Statistician, covering the fiscal year ended March 31, 1919, stated that the public accounts of the various provinces as then issued varied considerably from each other and that even when terminology was the same there was a difference in connotation. The report noted the need for comparability of data and promised to attempt some correlation by applying a uniform schedule to the several series of accounts.

Turning to municipal statistics the report indicated that the problem was more complicated since there was little or no uniformity even between municipalities in the same province. As a beginning it was indicated that the Dominion would by direct communication with them, collect statistics from a fixed group of municipalities.

The history of the Bureau's efforts to present complete and coherent data on public finance through the last thirty years is the story of its efforts to achieve the objectives outlined in the report quoted above, plus the story of the achievements of the Rowell-Sirois commission in presenting to the government an adequate description of the intricacies and interdependencies of Dominion, Provincial and Municipal finances.

Rowell-Sirois Commission

This commission, appointed by order-in-council August 14, 1937, to enquire into Dominion-Provincial relations devoted, as was natural, most of its time and the expenditure of most of the funds allotted to it to a study of the financial relationship between the Dominion and its constituent provinces with considerable subsidiary study of the financial relationships between provinces and their municipalities.

So exhaustive were the studies of this commission, that the Bureau of Statistics voluntarily withdrew from analysis of public financial statistics while the commission was in being, realizing that the material would always be available and that any attempt on the part of the Bureau to compile its own material would only result in duplication of data and unnecessary work for those provincial officers whose functions it was to supply it.

The Rowell-Sirois commission reported to the government in 1940 with its financial statistics as complete as was practicable to the year 1939. During the year 1941, in order to prepare for the Dominion-Provincial conference, the staff of experts who had been employed by the Rowell-Sirois commission were, as far as possible, re-assembled in order that statistical compilations might be extended to that provincial fiscal year ending closest to December 31, 1940.

The Bureau of Statistics resumed its work in the field of public financial statistics in 1940 and did so on a greatly enhanced scale. The schedules, classifications and work methods of the Rowell-Sirois commission were, in so far as they were applicable, retained by the Bureau and these, modified by the results of subsequent experience are the bases of the Bureau's work today when, because of the larger amounts involved and increasing governmental performance of functions which only a few years ago would not have been thought to come within its purview, data on public finance and full information concerning it is of paramount importance to all Canadians.

Provincial Financial Statistics

As was noted above there was until comparatively recently little or no uniformity, one province to another, in the statistical data each presents in its Provincial Treasurer annual report. Nevertheless the Bureau of Statistics between its creation in its present form in 1918 and 1933 took these reports and so analyzed them as to present a compilation of provincial data in such form as would permit of some comparability. Based on this analysis an annual report was published by the Bureau discussing provincial financial statistics. It was admittedly unsatisfactory and far from a complete review of the subject.

A conference of Dominion-Provincial prime ministers held in Ottawa in January, 1933, primarily to discuss matters arising out of the depression and the consequent need for relief payments recommended that "The Dominion Statistician should communicate with the Treasurers and statisticians of the various provinces with a view to securing uniformily classified statistical information". It was recognized that only if this were achieved could any realistic division of relief burdens be brought about.

As a result of this resolution correspondence was entered into between the Minister of Trade and Commerce, and the various provinces which resulted in the calling of the first *Conference on Statistics of Provincial Government Finance* in Ottawa in September, 1933. It was attended by representatives of the Dominion Bureau of Statistics, The Dominion Department of Finance and the Treasury departments of the various provinces. The conference was held at the technical rather than the policy making level and thus could recommend rather than adopt certain lines of action. Wide areas of agreement were established and many of the recommendations were almost immediately adopted. It can fairly be said this conference marked a new era in the presentation of Provincial financial statistics and that since it was held more and more material has been made available to the Bureau of Statistics and through it to the people of Canada.

This conference was, of course, intended to be only the precursor of others which would be called as need was indicated. However the appointment of the Rowell-Sirois commission and the subsequent outbreak of war combined to postpone the calling of a further conference until 1943. Since that date they have been called biennially and continuing committees have been set up to examine problems either left unsettled by conferences themselves or which have arisen between conferences.

As a result of these meetings and other steps taken by the provinces it is now possible for the Bureau of Statistics to publish annually *Financial Statistics of Provincial Governments* which presents a coherent and understandable picture of the revenues, expenditures, bases of taxation, net and gross debts of each province in such form that the financial position of each can be compared to that of any of the others and further to present a composite picture of the economic health of all provinces combined. There is, of course, no intention to discontinue, in the foreseeable, future holding of these conferences. Much yet remains to be achieved.

Municipal Financial Statistics

Concomitantly with the improvement in the gathering of financial statistics from the various provinces there was an improvement in the work of gathering statistics in the much more complicated matter of municipal finances. Following its establishment the Bureau undertook to obtain, by direct communication with the financial officers of them, financial statistical data from municipalities of a certain population groups. This method of obtaining data was obviously inefficient. The Bureau's schedules were prepared with the advice and assistance of provincial authorities but, more often than not, did not readily lend themselves to the peculiarities of the accounting systems of the various municipalities. As a result there was need for considerable reassembling of data, analysis of financial statements, etc., which placed a heavy load on the shoulders of the municipal officers who had to make the returns to the Bureau.

The conference of 1933 on provincial statistics, recommended that a meeting be held to deal with the problem of co-ordinating municipal Statistics. This recommendation was reinforced by similar ones from the Canadian Federation of Mayors and from the Municipal Finance Officers' Association of Canada and the United States. As a result of these representations a conference was called in July, 1937, which resulted in a complete overhaul of the methods previously used. Henceforth it was decided the data would be gathered by the provincial departments of municipal affairs and relayed to the Bureau of Statistics.

Two further conferences were held in 1940 when it was decided that a *Manual of Instructions* on the preparation of revenue, expenditure and balance sheet statements should be prepared for the guidance of all municipal finance officials. This was printed and given very wide circulation throughout the various provinces although adoption of all its suggestions has not yet been made compulsory by all provinces. The manual is being revised, will be reprinted this year. At the same time the 1940 conference recommended the preparation of a dictionary of *Municipal Accounting Terminology*. This was prepared and is now in general use.

Further conferences were held in 1947 and 1948 and at both these as at the earlier ones continuing committees were appointed to deal further with matters left open between meetings. As a result of this work it is now possible for the Bureau to publish annually *Financial Statistics of Municipal Governments.*

To sum up: It may now be said that the Bureau is in a position to present to the people of Canada annual statements showing the gross income and expenditure of all governmental organizations authorized to raise funds by taxation. This material is of tremendous importance to the various taxing bodies themselves and to many other groups of Canadians. Investors both private and public use it to determine the propriety of purchasing municipal, provincial or even federal bonds. It is also used as a basis for establishing the financial relations between municipalities and their provincial governments and similar relations between the Dominion and its component provinces.

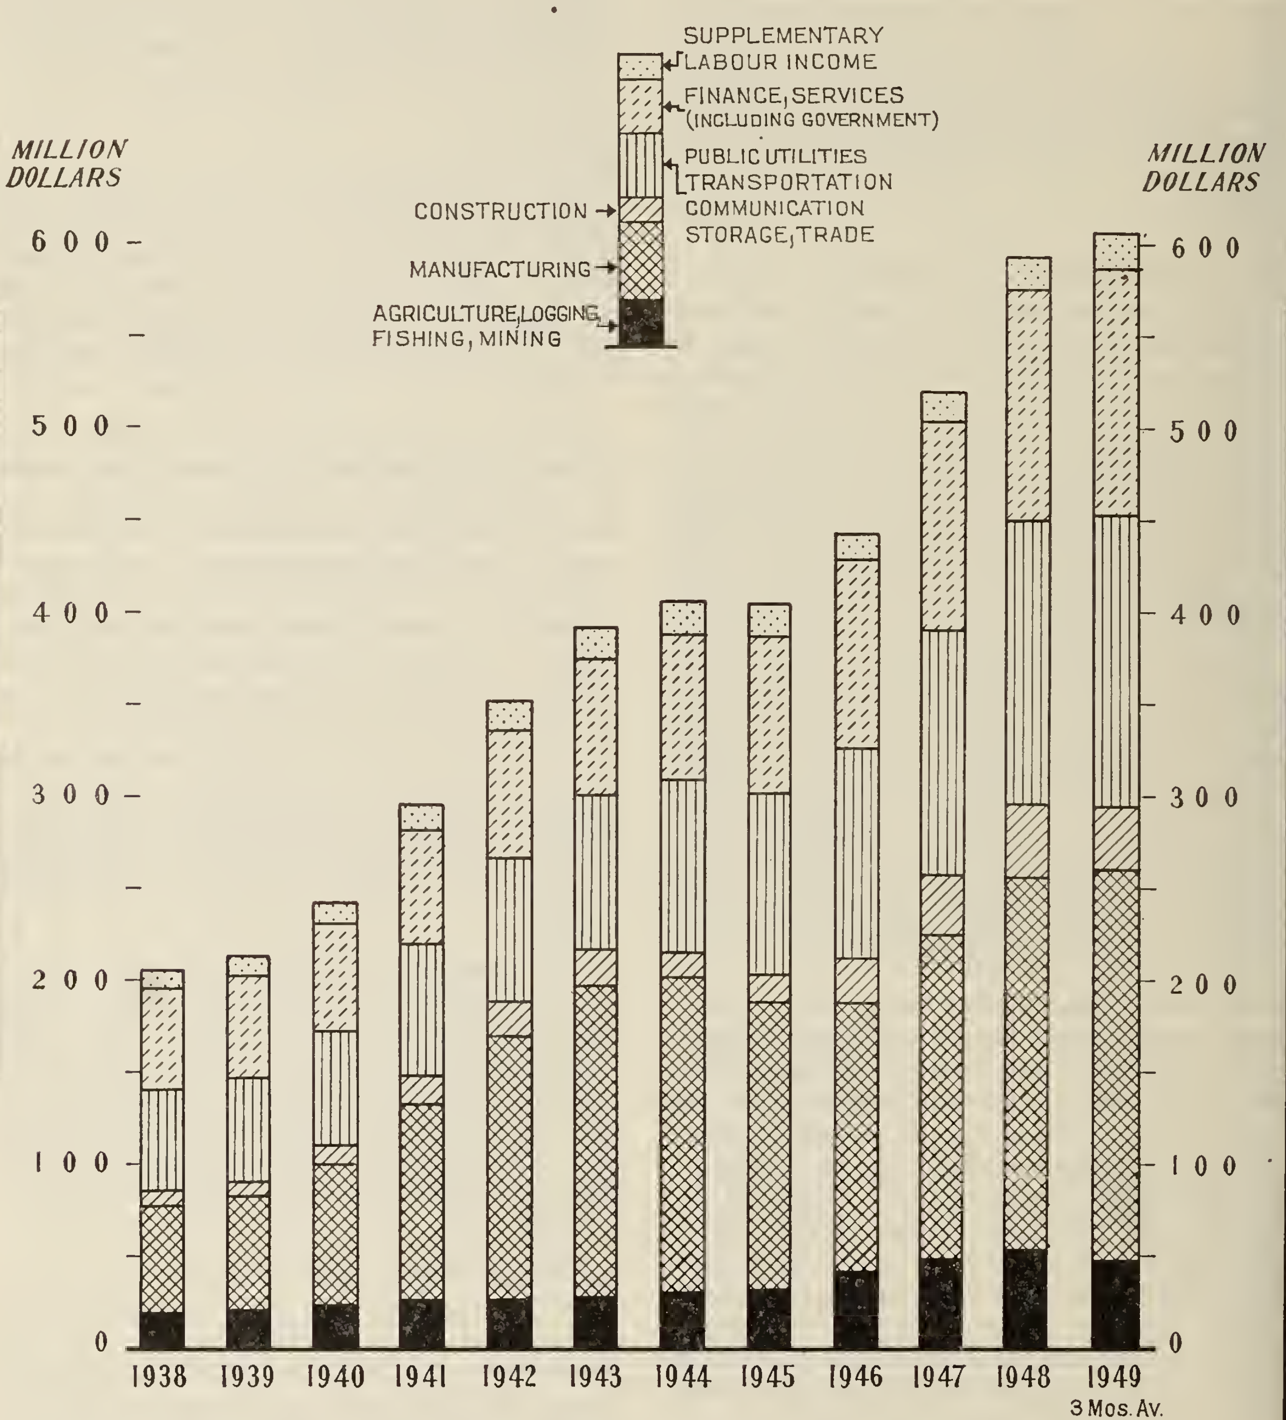
No studies of the economic budget of the nation would be complete without due account being given to the role of governments and their finances. Public finance data is an essential component in the construction of national income accounts and in estimating gross national production and national expenditure, as well as for other "social" accounting studies.

In recent years, further emphasis has been added to the need for more comprehensive statistics of public finance for international purposes such as their use by governments and others in considering the effects of governmental financial activities on economic variables such as prices, monetary circulation and national income.

CANADIAN LABOUR INCOME

MONTHLY AVERAGE FOR THE YEARS

1938-1949



Current Economic Conditions

The trend in Canada's economy appears to be heading irregularly upward towards the higher levels usually expected in the summer and autumn months. Industrial production for the month of May continued to move to new highs with the general index of production standing at 187.0, an increase of .9 over the revised April figure of 186.1. Although increases did not occur in all industries, the subindexes show substantial increases in such items as the production of pig iron, which rose from 264.8 in April to 290.4 in May, an increase of 9.7 percent, and also in the production of non-durable manufactures, where the figure rose from 178.2 to 190.6 for April and May respectively, an increase of approximately seven percent.

Offsetting these increases to some extent were the declines in the subindex for durable manufactures which fell slightly to 221.9 from the April figure of 225.5 and in the production of sugar which dropped from 190.6 in April to 167.8 in May, a shrinkage of 12 percent.

The Cost-of-Living index reached an all time high between May 2 and June 1 when the figure rose from 159.5 to 160.5, a gain of a full point. This was nine-tenths of a point above the previous high attained in October and November of last year when the index stood at 159.6. The increase was attributable to an increase in the subindex of food which moved 3.4 points during the month to reach 202.9. This mark is still below the high of 205.4 attained in October, 1948. The subindexes for fuel, light and home furnishings were contradictory to the main index in that they recorded slight declines, with the other subindexes remaining unchanged.

Wholesale prices of industrial materials for June continued to decline as has been the trend since the first of this year. The June monthly average of the weekly index number was 147.7 as compared with 149.9 in May. This is probably due, in part at least, to the high volume of production which has prevailed in recent months. The June figure was 5.8 points below that for the corresponding month of the previous year when the index stood at 153.4.

On the other hand the index of wholesale prices of farm products continued to increase, again following a trend that has been noticeable since the turn of the year. The figure rose from 147.6 in May to 149.7 in June, this however, is still below the figure reported for the corresponding month of 1948 when this index reached a level of 153.7. The indexes for both industrial materials and Canadian farm products are on a 1926 = 100 base.

The number of claimants on the live unemployment register continues to decline with the May total standing at 95.8 thousand persons as compared with April's total of 134.5 thousand. The decline month to month was thus approximately 29 percent. The May figure is, however, considerably above that for the same month last year when 71 thousand claimants for unemployment insurance were registered.

Construction of Dwelling Units

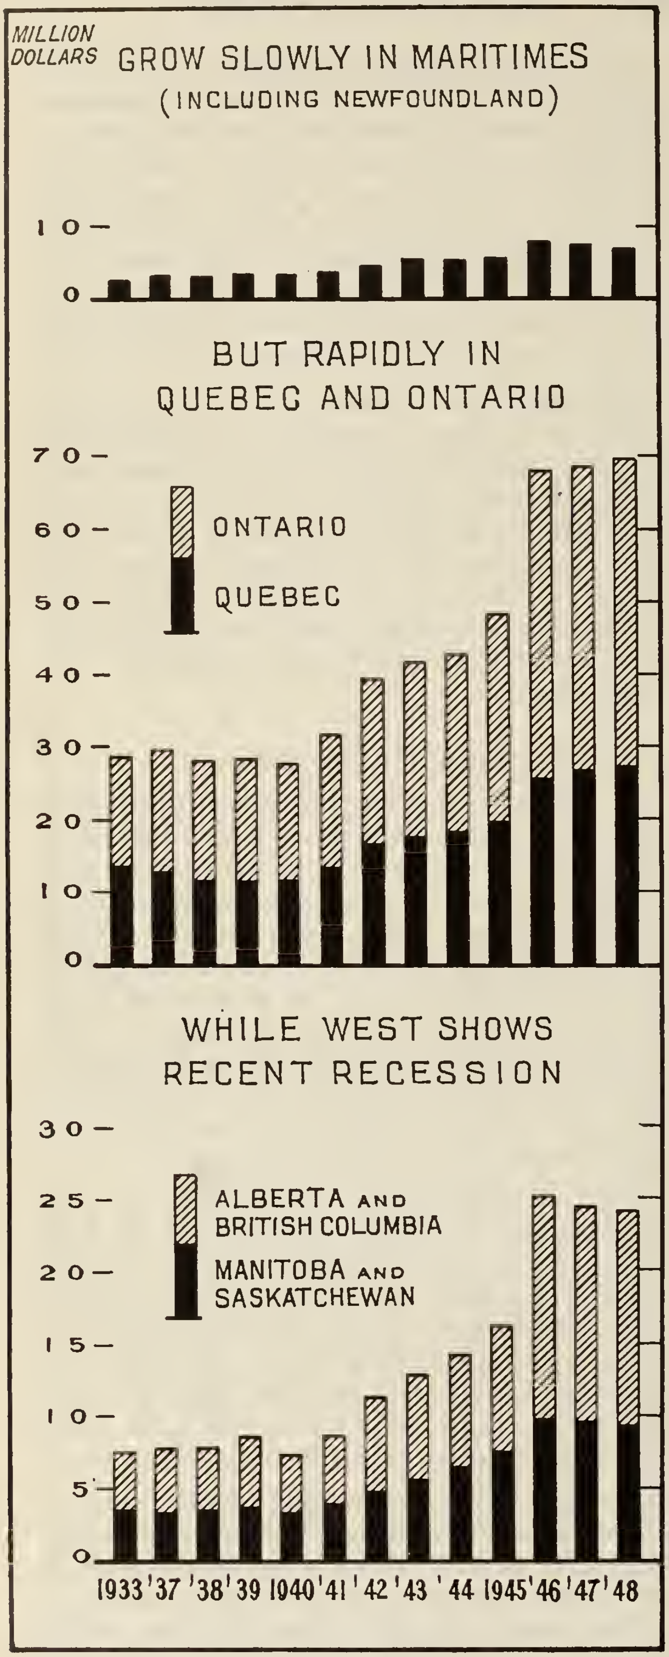
An estimated 7,374 new dwelling units were completed during the month of May according to the most recent survey of the construction industry. This total exceeds by more than 17 percent the completions in May, 1948, which totalled 6,284. The comparative figure for April last was 7,251. The cumulative total of completions for the first five months of the current year is 32,451 while that for the similar period of 1948 was 24,582. There has, therefore, been an increase in completed dwellings one year to the next of almost 33 percent.

New dwelling units, not completed but under construction totalled 53,533 as of May 31 last, compared with 44,572 at May 31, 1948, and starts during the month numbered 12,809 compared with 11,407 during the same month of last year, and 8,466 during April, 1949. The cumulative total of starts since the beginning of the year stood at 29,671 as compared with 26,359 for the same period of the previous year.

From the type of dwellings being built it would appear probable that approximately 28 percent of the total are being constructed for rental purposes and that the remainder will be owner occupied. This is an increase in owner occupancy over the previous year since

LIFE INSURANCE SALES ★

MONTHLY AVERAGE FOR THE YEARS 1933-1948



★ Total New settled-for Insurance.

it was estimated that of the dwellings completed in the first five months of last year, 32 percent would be offered for rental.

Canadian Farm Income

A preliminary estimate by the Bureau of Statistics indicates that Canadian farmers received in cash income from the sale of farm products during the first quarter of 1949 a total of $406 million as compared with $380 million for the first quarter of 1948 and $333 million for the similar period of 1947. There were therefore increases in income of 6.9 percent and 21.7 percent over the previous years.

The estimate is based on reports of marketings and the prices received by farmers for these marketings of principal farm products and are subject to some revision as more detail becomes available. The estimate includes income from the amounts paid out as grain participation, adjusting and equalizing payments and amounts received by the farmers from Dominion and Provincial governments as subsidies to prices, since these must be considered as part of the return from the sale of farm products. Payments under the provisions of the Prairie Farm Assistance Act do not fall into this category and are therefore not included in the estimate.

Compared with a year ago, cash income from the sale of field crops was up more than 20 percent in the first quarter of this year with the total payment standing at $134 million. This increase can be largely attributed to an increase in the volume of marketings of the five principal grains although in the case of wheat a higher price was a contributing factor. Income from the sale of field crops for the first quarter of 1948 was $109 million and for the same period of 1947 $140 million.

Income from the sale of live stock, January-March of this year, is estimated to have totalled $264 million, virtually unchanged from that of the same period of 1948 but considerably above the $188 million for the corresponding portion of 1947. With the exception of beef cattle and calves, marketing volume was down this year as against last and this volume shrinkage was offset by higher prices, with the index of live-stock prices indicating an overall price increase of more than 20 percent.

Recent U.S. Developments

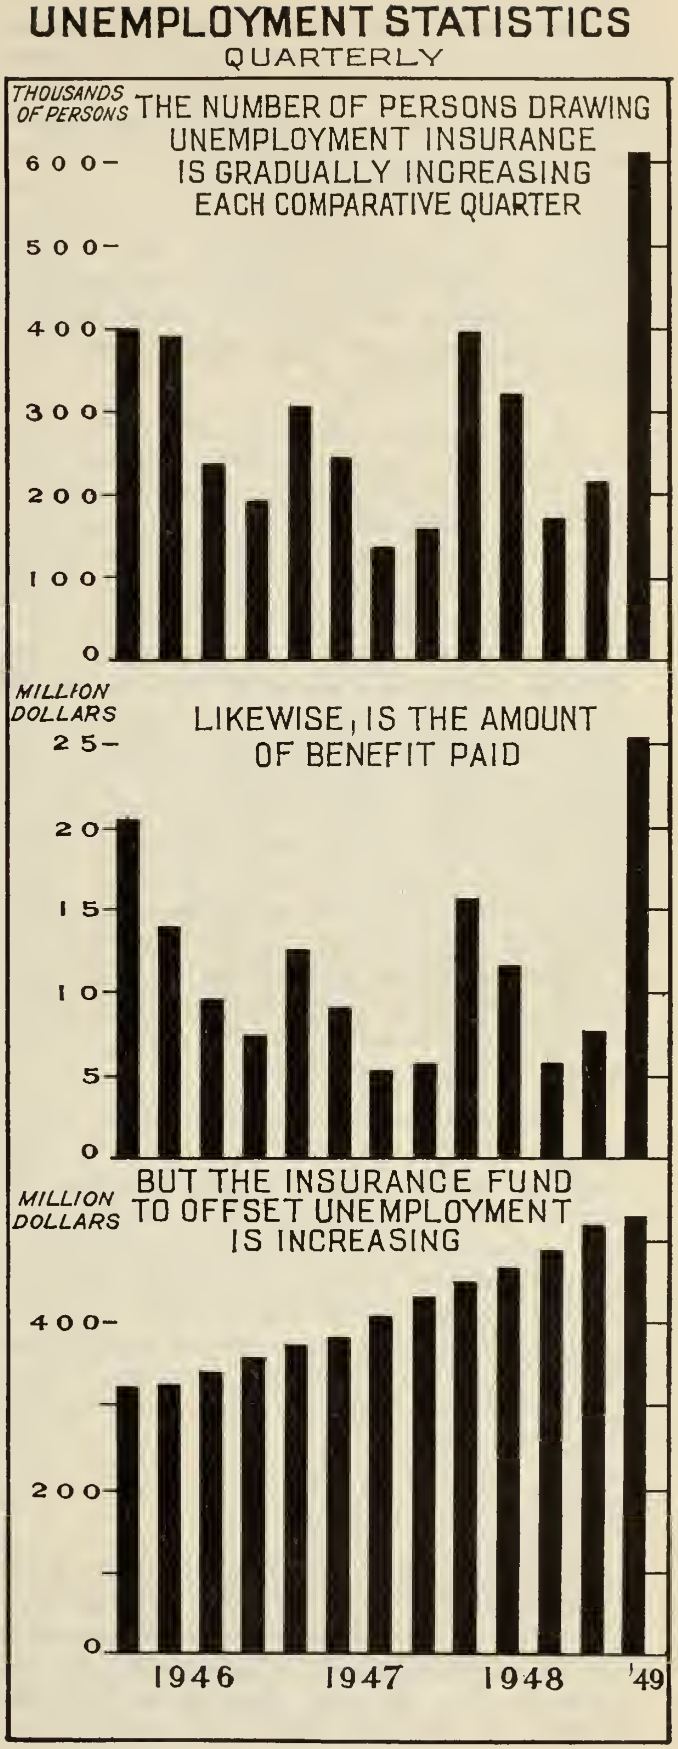
Unseasonable weather has resulted in sharp drops in estimates of the current United States wheat crop. Whereas earlier estimates had indicated that a record crop was in prospect the most recent survey forecasts that this year's crop will be 1,189 million bushels, eight percent below the 1,288 million bushels harvested last year. However, even this year's yield will be 20 percent above the yearly average of 992 million bushels.

The most recent estimate is lower by 148 million bushels than that reported on June 1, 1949. The reduction is attributable to losses suffered since that date in the more important wheat producing states. Favourable conditions continue to exist in the east north central states but in the southern great plain states of Texas, Oklahoma and Kansas excessive wet weather during the harvest period has resulted in lower yields than were expected. In contrast the northern plain states and the pacific northwest states report that due to excessive drought the yields in these areas will be considerably lower than was earlier estimated.

United States steel mills were scheduled to operate at 78.3 percent of capacity during the week ending July 22, this is 0.5 percent higher than for the previous week but is a decline of 15.9 percent from last year when for the corresponding week operations were at 93.1 percent of capacity.

The American Steel Institute reports that there was a decline of just over one million tons of steel production in June compared with May and that operations in the former month at 82.2 percent of capacity produced 6.5 million tons of steel. Production for the first half of 1949, due to high production in the earlier part of the year was 2.8 million tons above that of the first half of 1948. The cumulative totals were 45.9 and 43.1 for each of the two half yearly periods.

The automobile industry established a new post-war record for production, the highest since 1929, when during the week ended July 16, there were 155,350 units completed, including all types of automobile vehicles. The comparative figures for the previous week and the corresponding week of the previous year were 118,600 and 120,740 respectively.



Recent reports indicate a substantial decline in the dollar value of retail trade in the United States as compared with a year ago. Department store sales for the week ending July 9 were seven percent below those of a year ago and the cumulative total for the four last available weeks was eight percent below that of the same period of 1948. Independent retailers fared slightly better with dollar value of sale slipping two percent in June as compared with May and four percent below the figure for June of 1948.

The U.S. Bureau of Employment Security reported that there were 334 thousand new claims for unemployment compensation during the week ending July 9 and that the list contained two million continuing claims. Secretary of Commerce Sawyer has made public plans for a nation wide survey of business conditions. When this has been completed its findings and recommendations will be turned over to a 20-man committee, appointed by the President, which will be responsible for directing federal policy so as to relieve regional unemployment. Governmental purchases and new public works will also be so placed as to assist those regions which apparently suffer most severely from unemployment problems. Present indications are that the New England states where recent shut downs in textile and other plants have created a serious regional condition will be among the first areas to benefit from the proposed scheme.

In contrast to the Canadian scene there appears to be a let-up in the tempo of new dwelling construction. During the first six months of this year an estimated 450 thousand new units were started as compared with 478 thousand in the first six months of 1948. Of some significance is the fact that included in the new dwelling units started in 1949 are 20,200 which are publicly financed. The comparative figure for the same period in 1948 was six thousand.

Retail Trade Increases

The dollar value of Canadian retail sales during the month of May, 1949, amounted to $654 million as compared with $615 million for the same month of the previous year, an increase of 6.3 percent. During the first five months of 1949 the cumulative total of the dollar value of retail sales was $2,870 million while the comparative figure for the same period in 1948 was $2,671 million, the increase 1949 from 1948 being 7.4 percent.

In light of the fact that the retail prices index (commodities only) increased from May 1948 to May 1949 by only 5.1 percent it is probable that the increase in dollar value of sales of 6.3 percent from May 1948 to May 1949 represents not only the price increase but some slight increase in the volume of retail trading.

May retail sales at $654 million were slightly lower than those of April which were valued at $673 million, a 2.8 percent decline. This decline is undoubtedly attributable to the fact that with Easter Sunday falling on April 17 most of the Easter buying was done during that month and to the further fact that April had five Saturdays (the traditional buying day) while May had only four.

Regionally the greatest gains in May 1949 over May 1948 occurred in Ontario, Alberta and British Columbia with increases of 8.7 percent, 14.4 percent and 8.7 percent respectively. Saskatchewan with a drecrease of 0.4 percent was the only province not showing an increase one month over the other.

On a five month cumulative basis the three prairie provinces of Manitoba, Saskatchewan and Alberta continue to show remarkable advances over the similar period of the previous year with dollar value gains of 13.9 percent, 17.8 percent and 21.7 percent respectively.

Revenue Car Loadings

Car loadings of revenue freight for the week ending July 16 numbered 73,181 cars. This was an increase of 245 cars over the previous week but a decline of 4,548 cars or 5.8 percent from the figures for the corresponding week of 1948. By commodity loaded the chief declines were: pulpwood off 2,593 cars to 3,597 from 6,190; lumber off 900 cars to 3,870 from 4,770; gasoline off 734 cars to 4,462 from 5,196; building materials off 653 cars to 5,055 from 5,708.

The cumulative total for the first 28 weeks of the current year was 2,011,824 cars compared with 2,088,592 for the corresponding period of the previous year, a decline of 76,768 cars of 3.2 percent.

---

(1) Not applicable to Column 5 "Average hourly earnings".

(2) Annual data as of June 1, monthly data as of May 31, August 16, November 8, 1947 and February 21, June 5, September 4, November 20, 1948 and March 5, 1949.

(3) See note on page 20.

(4) Prior to 1945, figures shown are those relating to hourly earnings in one week in the month of highest employment (overtime included) reported by manufacturers to the annual Census of Industry. For period beginning in 1945, see table 12.

(5) Includes retroactive payments to railway employees.

(6) Conversions are included with annual data only.

(7) Includes Newfoundland as of April, 1949.

*Under revision.

---

(1) Personal income is given on an annual basis for months as well as for years.

(2) Includes army civilian supply exports from February 1947.

(3) Annual totals are averages of end of month figures.

(4) Standard and Poor's Corporation. The series currently used represents 416 stocks.

---

(1) As of June 1. (2) Exclusive of stillbirths. (3) Not applicable to figures on population. (4) Yukon and North-West Territories not included in figures for births, marriages and deaths.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

---

(1) Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

---

[1] As of April 1949, imports of Newfoundland are consolidated.

[2] Annual computation to 1946 entails considerable adjustments in production and external trade as described on page 23 of the Coal Report for 1946.

Note: As of April 1949, Newfoundland is included.

(1) Total pulp production was revised where necessary to cover "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

(2) Totals include unspecified pulp.

---

[1] Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

[2] Excluding producers' interchange.

[3] Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

[4] Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December 1946.

(1) The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1) Figures cover the production of firms which normally account for 85 per cent of the total for Canada.

(2) Since January, 1949, includes concrete chimney blocks. (3) Prior to 1947 data on producers' sales were used to indicate production. Annual and monthly production for 1947, 1948 and 1949 are obtained by adjusting producers' sales for changes in inventories.

---

(1) Hollow blocks including fireproofing and load-bearing tile. (2) Planks and boards.

(3) Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

(1) Includes imports to the end of 1947-48 while in 1948-49 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

(2) Figures of customs exports for 1945-46 and 1946-47 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1947-48 are customs exports and will be adjusted when required information is available.

(3) Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption.

(4) Includes customs exports of Canadian oatmeal and rolled oats.

(1)Available for January, April and August only. (2)Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date. (3)Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. (4)Prior to 1941 prices were quoted on a live weight basis. (5)Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W. (6)Subject to revision.

*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada. Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies. Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments".

(1) Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transactions,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

(2) Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board. *See footnote of page 96.

---

(1) Does not include re-exports.

(2) This column has been revised to exclude ferro-alloys and iron ore. Exports of primary iron and steel now comprise pigs, ingots, blooms and billets, and rolling mill products.

(3) Other iron and steel has been revised to include iron ore.

Note: As of April 1949, the Trade of Canada includes that of Newfoundland.

[1] Before 1935 totals are overvalued due to the inclusion of U.K. excise taxes on imports of spirits from that country.

(1)The annual statistics embrace all steam railways, while monthly data refer to railways with annual operating revenues of $500,000 or over. (2)Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities. (3)For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling $29,085,087, paid in September, were not included in that month's operating expenses. Payrolls as now reported monthly are according to the new wage scale.

Mining, Metallurgical and Chemical Statistics

In the June issue of the *Canadian Statistical Review* the functions and operations of the Census of Industry Division of the Bureau of Statistics were outlined, and it was indicated that subsequent issues would contain detailed reviews of each Section. In accordance with this plan, there follows a description of the Mining, Metallurgical and Chemical Section, the field which it covers, the methods used in the collection of statistics, and the uses made of the resulting data.

This Section is concerned first with the collection and publication of statistics of Canada's mining industry, and secondly, with the collection and publication of statistics of the manufacturing industries which use minerals and mineral products as their chief raw materials. These latter industries are in four groups, namely, Manufactures of Iron and Steel and Their Products; Non-ferrous Metals and Their Products; Non-metallic Mineral Products; and Chemical and Allied Products.

The collection of statistics on mineral production has always been one of the functions of the provincial Departments of Mines; also, up until 1920 the federal Department of Mines collected information on Canadian mining operations. In 1920 the statistical work formerly done by the federal Department of Mines was transferred to the Bureau of Statistics, and co-operative arrangements were made during subsequent years with the Departments of Mines of the various provinces whereby a joint schedule printed by the Bureau is used. The schedule is mailed in triplicate, one copy to be retained by the reporting firm, one for use of the provincial authorities, and one for the Bureau. This method of collecting information avoids duplication of effort by the reporting companies and leads to similarity in reporting results in federal and provincial publications.

Since the mining industry is conceived as an integral part of industry in general, the schedules cover not only production but employment, salaries and wages, fuel and power used, and other data pertinent to mining operations. They are designed in collaboration with provincial officers, changes being made as new conditions arise.

For statistical purposes of collection and reporting, the mining industry is divided into four broad classes: (a) Metal mining and non-ferrous metallurgical operations, (b) Fuels (coal, oil and natural gas), (c) Non-metal mining or the production of industrial minerals, (d) Clay products and other structural materials.

In view of the importance of coal as a fuel in Canada, a separate annual report on Coal Statistics is issued, including figures of production, imports, exports, and coal made available for consumption. This is supplemented by a monthly coal bulletin, giving similar data by months, and further information on wholesale and retail sales. Similar co-operative arrangements for the collection and compilation of monthly coal statistics have been made with the proper authorities in the coal-producing provinces as we have with regard to the collection of other mining statistics.

In addition to the annual data so collected, monthly figures are obtained and published on the production of Canada's 16 leading metals and minerals or mineral products (gold, silver, copper, nickel, lead, zinc, coal, petroleum, natural gas, asbestos, salt, gypsum, iron ore, lime, cement, and clay products).

Preliminary and Annual reports are published on the Mineral Production of Canada, and in addition a separate report is issued for each mining group, such as gold mining, asbestos mining, silver-lead-zinc mining, etc., as the totals for each industry become available. In all, 24 annual bulletins and 9 monthly bulletins are issued by the mining statistics sub-section.

Manufacturing Industries Bases on Mineral Products

The statistics of the four important manufacturing groups named at the beginning of this review are collected, compiled and published in mimeograph or rotaprint bulletins. The design of the schedules used in the collection of this information is under constant supervision and change in order to keep up-to-date, particularly with regard to the Materials Used and Products Made. Where possible, before changes are made consultation with industry or an industrial association is made.

The Iron and Steel Group is divided into 18 sub-groups or industries, comprising such operations as primary iron and steel manufacture, agricultural implements, automobiles, machinery, railway rolling stock, shipbuilding and repairs, and other products of iron and steel.

The Non-ferrous Metals Group is comprised of such industries as brass and copper products, aluminum products, electrical apparatus and supplies, jewellery and electro-plated ware, and miscellaneous non-ferrous metal products.

The Non-metallic Mineral Products Group consists of the manufacturers of asbestos products, cement products, clay products, coke and gas products, products of petroleum, and other similar products whose principal raw materials find their sources among the non-metallic minerals.

The Chemical and Allied Products industry is rapidly growing in importance in Canada, and during the war the growth was phenomenal. It included the manufacture of heavy or primary chemicals, such as acids, alkalies, and salts; fertilizers; compressed gases; medicinal and pharmaceutical preparations; paints; pigments, and lacquers; soaps, washing compounds, etc.; and toilet preparations.

These four groups, therefore, give a well-rounded picture of the manufacturing operations of a chemical and metallurgical nature. In all, during 1947, 67 annual bulletins were issued. In addition to statistics on employment, salaries and wages paid, fuel and power used, details are given of the materials consumed in manufacture and products made. Tables of imports and exports are also included for comparison with the production data and a list of firms covered in each survey is appended.

Monthly Data

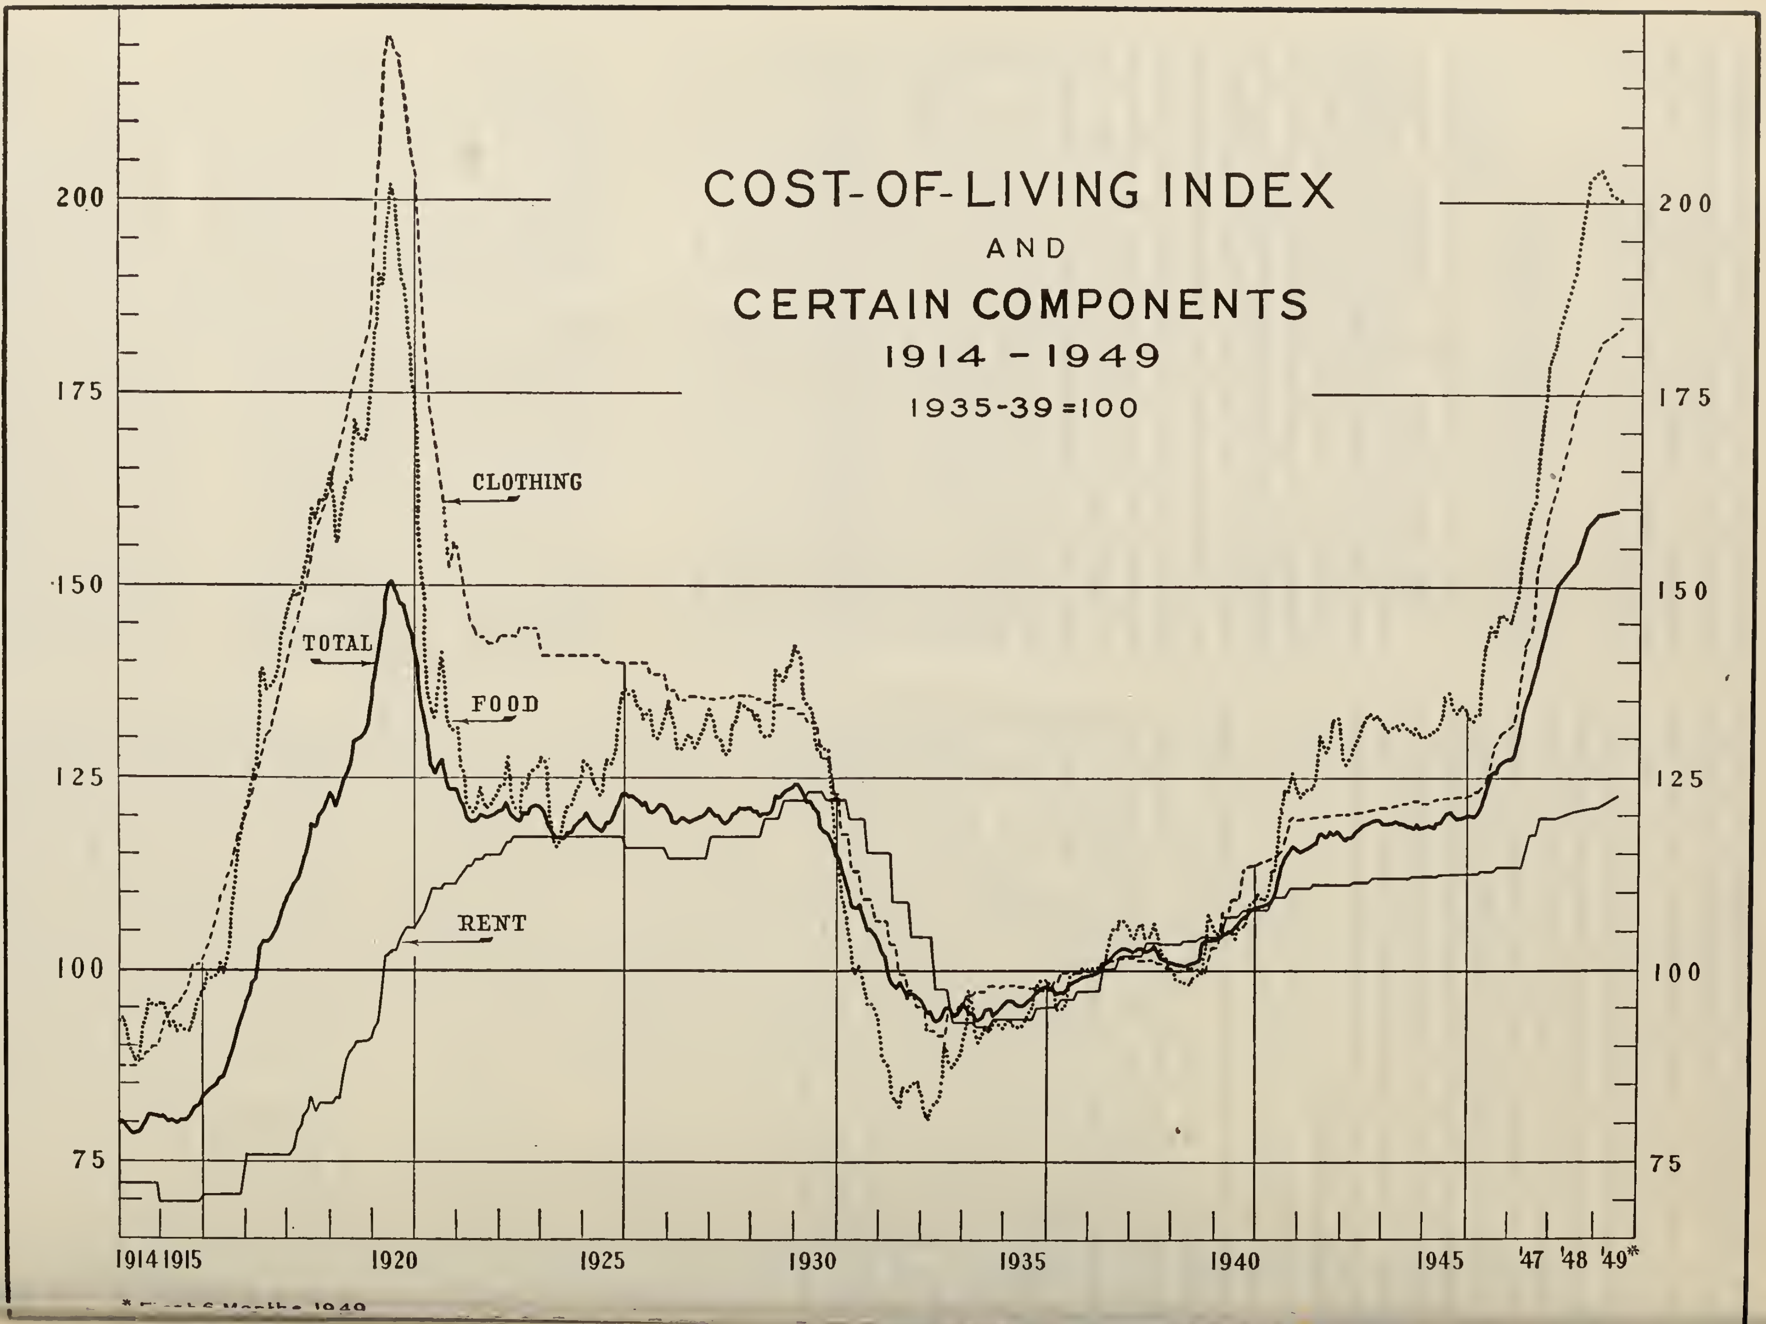
Prior to the last war, this section issued monthly information on the production of iron and steel, which is considered a good barometer of industry in general. Figures on automobiles and radio production were also released. During the war the demand for current statistics of strategic materials and products grew rapidly, and the collection to a large extent was the prerogative of the Wartime Prices and Trade Board and the offices of the various Controllers. With the cessation of hostilities, it was considered advisable to continue the collection of information on certain of these commodities, and the statistical work on some of the controls was assumed by the Industrial Census Division of the Bureau to a limited extent, so that in addition to the aforementioned commodities, statistics are available from the section under review, monthly, on refrigerators, batteries, refined petroleum products, wire and wire products, mineral work, washing machines, scrap iron and steel, non-ferrous metal scrap, gypsum products, and paint sales.

Statistics of the products of oil refineries are worthy of special mention. During the war because of a limited supply of these strategic products, very detailed information was collected and compiled by the Office of the Oi Controller. After the war this work was transferred to the Mining, Metallurgical and Chemical Section and the collection and publication of these statistics have been continued on a monthly basis. For years Canadian oil refiner depended very largely on the import of crude and during the years immediately after th war fuel oil was in short supply. Since that time, foreign fields have increased their output, and what was more important, a large pool has been discovered in Alberta, particularly in the Leduc and Redwater areas. Whereas a few years ago the Prairie provinces imported large quantities of gasoline, now with the increase of refining facilities they will be self-sufficient, in all types of petroleum products. Indeed plans are being made to transport the oil by pipe line, to other parts of Canada at least. Domestic production of course reduces the demand for imports and improves the exchange situation.

In addition to the foregoing, and where deemed advisable and necessary, this Division is prepared to make special surveys. As an example, at the present time it is proposed to collect information in January next from Canadian mining companies, asking for their expenditures on both capital and process equipment and supplies. This will have the effect of indicating the importance of the industry to the general economy of the country, and it will show Canadian manufacturers possible markets for their goods. On several previous occasions a special Directory of Chemical Industries was prepared. This is now being brought up-to-date. Other special reports include the sale of pest control products by Canadian registrants, the consumption of chemicals in municipal waterworks and the consumption of refractory materials in metallurgical plants.

Uses Made of These Statistics

Much use of this comprehensive information is now being made by Canadian industry. Concerns wishing to enlarge their output or manufacture new products are constantly enquiring for data that will help them in their planning. A count made during the first two months of this year indicated over 200 special requests for information. This is in addition to a large mailing list maintained for the bulletins. Other Government Departments are continually using the data, as well as advertising agencies, economists, and University students. Preparation of briefs for presentation to Government boards base many of their arguments on information furnished by the Bureau. Foreign Commercial Attachés established in Ottawa are referring constantly to this Section, and statistical agencies of private and public nature are on our mailing lists. The Bureau is the official source of production data for Canada at the offices of the United Nations.



COST-OF-LIVING INDEX
AND
CERTAIN COMPONENTS
1914 - 1949
1935-39=100

* First 6 Months 1949

Current Economic Conditions

A survey of the currently accepted economic indicators reveals that Canada's economy appears to be maintaining a reasonably steady position with little change, allowing for usual seasonal fluctuations, from month to month or from the same periods of the previous year. The index of production has fluctuated March to July within a range of a single point and currently stands at 185.9 (base 1935-39 = 100). The index of industrial employment stood at 198.3 for July, 1949 compared with 194.5 for June and 198.0 for July of last year. During the last several months no perceptible change in the ratio between factory inventories and shipments has been observed, an indication that goods are moving into hands of the consumers in a steady flow.

As of August 16 Canada's wheat crop was estimated at 391.5 million bushels, only 1.8 million bushels below that harvested last year but about 18.6 million bushels below the ten year (1939-48) average. This year's crop is, however, being reaped from a near record acreage since it is estimated that the 1949 seeded area was 27.5 million acres as compared with one of 24.1 million last year and a ten year acreage of 23.5 million.

The yield on the Prairie provinces where continued early drought and the threat of grasshopper and other damage had threatened, a very short crop will, it is now estimated, amount to 362 million bushels, only about a million below last year. Saskatchewan's wheat production is now placed at 199 million bushels; Alberta's at 96 million and Manitoba's at 67 million. The yields per acre are 21.2 bushels in Manitoba, 12.7 in Alberta and 12.6 in Saskatchewan. Of the 29.5 million bushels produced outside of the Prairie provinces, Ontario is expected to account for 25.2 million with a yield of approximately 30 bushels to the acre.

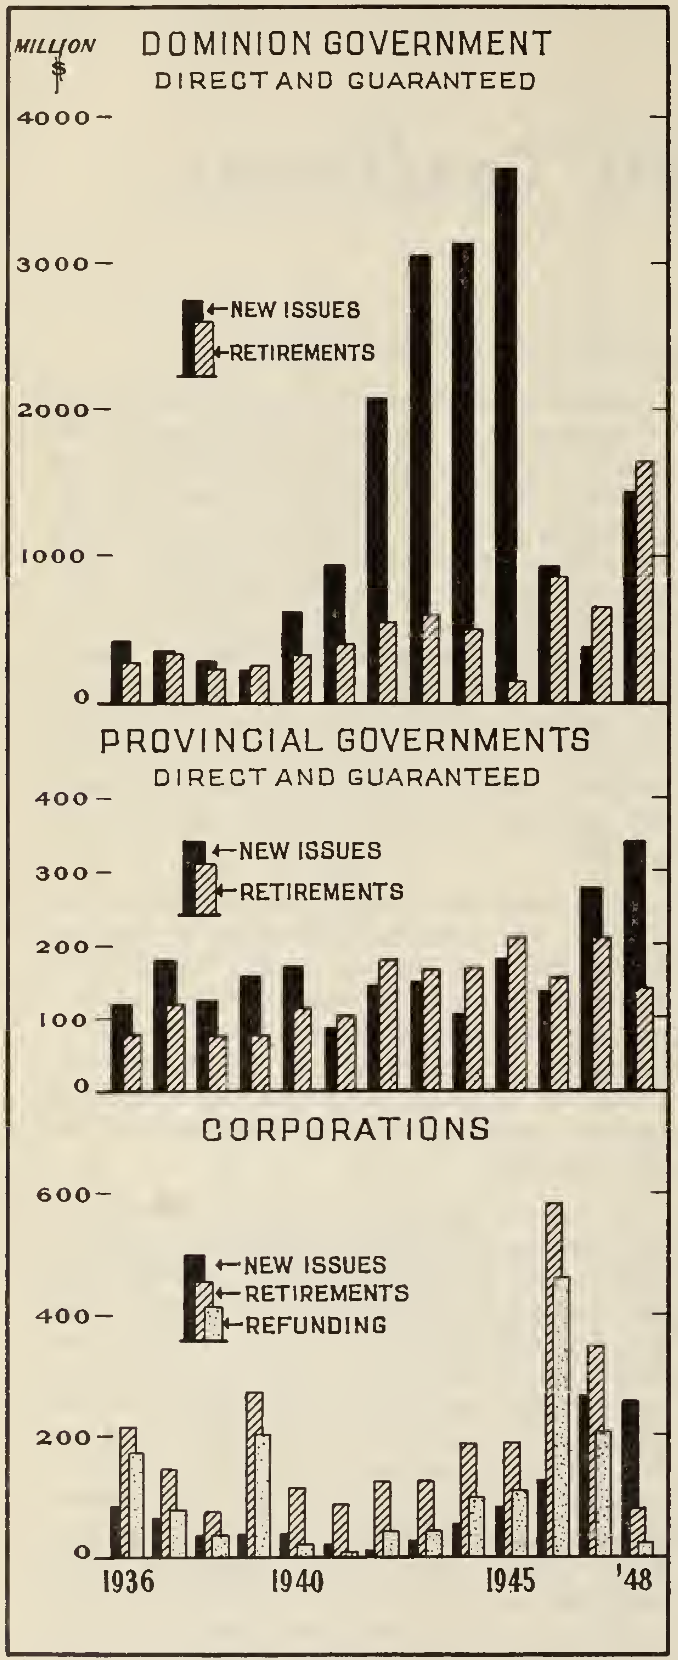
Six Months Foreign Trade

Canada imported during the first six months of the current year goods to the value of $1,409 million and exported domestic products valued at $1,425 million. Allowing for the re-export of foreign goods to the value of approximately $13 million there was a half yearly favourable balance of trade of $29 million. The comparative figures for the first half of the year 1948 were: imports $1,270 million, exports $1,400 million, re-exports of foreign goods $19 million, favourable balance of trade $149 million and for the year 1947: imports $1,257 million, exports $1,328 million, re-exports $17 million, favourable balance of trade $88 million.

Thus while the value of both exports and imports has increased materially in the first half of this year over the similar period of the two previous years the increase in the value of imports has radically exceeded that in exports. Canadian prosperity giving rise to an ever increasing demand for goods and improving supplies abroad have both contributed to this phenomenon.

By far the greater portion of the reduced favourable trade balance is caused by a greatly increased importation from the United States and a small rate of increase of exports to that country. During the period under review imports from the United States rose 14 per cent as compared with the similar period of 1948 while exports increased at only about half that rate. The comparative figures for the first six months of the current and the two previous years are: 1949, imports $1,009 million, exports $691 million, unfavourable balance of trade (allowing for re-export of foreign goods) $308 million; 1948, imports $885 million, exports $646 million, unfavourable balance of trade

BOND ISSUES AND RETIREMENTS*



*Par value in million Canadian Dollars

$228 million; 1947, imports $981 million, exports $482 million, unfavourable balance of trade $488 million.

It will be noted that imports from the United States for the first six months of 1948 were $97 million below those for the similar period in 1947. This was undoubtedly due in very large part to the restrictions which were placed on imports from that country in the fall of 1947 and removed, for the greater part late in 1948 and early in the current year. It appears probable that the high imports for the first six months of this year can be ascribed to buying of those articles which were earlier refused entry into this country. An additional factor was the easier demand for steel in the United States during the spring of this year and the consequent availability of it for exports from that country.

A further factor contributing to the reduction of Canada's balance trade has been a reduction in sales to and an increase in purchase from the United Kingdom. These divergent trends reflect the British effort to achieve parity in her dealings with dollar countries and are likely to continue at least for the remainder of this year.

It should be noted that prior to April 1, 1949, shipments from Newfoundland were considered as imports and sales to her were counted as exports. Subsequent to that date Newfoundland's trade with other portions of the world has been included in Canadian foreign trade totals.

Alberta Oil Prospects

The proving of the Leduc and Redwater oi fields in Northern Alberta is expected to alte radically the entire economy of the west an to some extent that of all Canada. With thes fields having estimated reserves of 300 millio barrels in Redwater and 250 million barrels i Leduc nothing but transportation difficultie can prevent them from making Canada self sufficient in this regard.

The very existence of these rich fields ha given great impetus to further exploration i other parts of Alberta. It is estimated that a the present time exploration costs in th province are between $100 million and $150 mil lion a year, sums larger than the total amoun spent in all the years previous to the discover of the Leduc field. Most estimates of Alberta's possible oil reserve place it at approximately a billion barrels with some putting it as high as five billion. The latter figure would put the province among the great oil sources of the world.

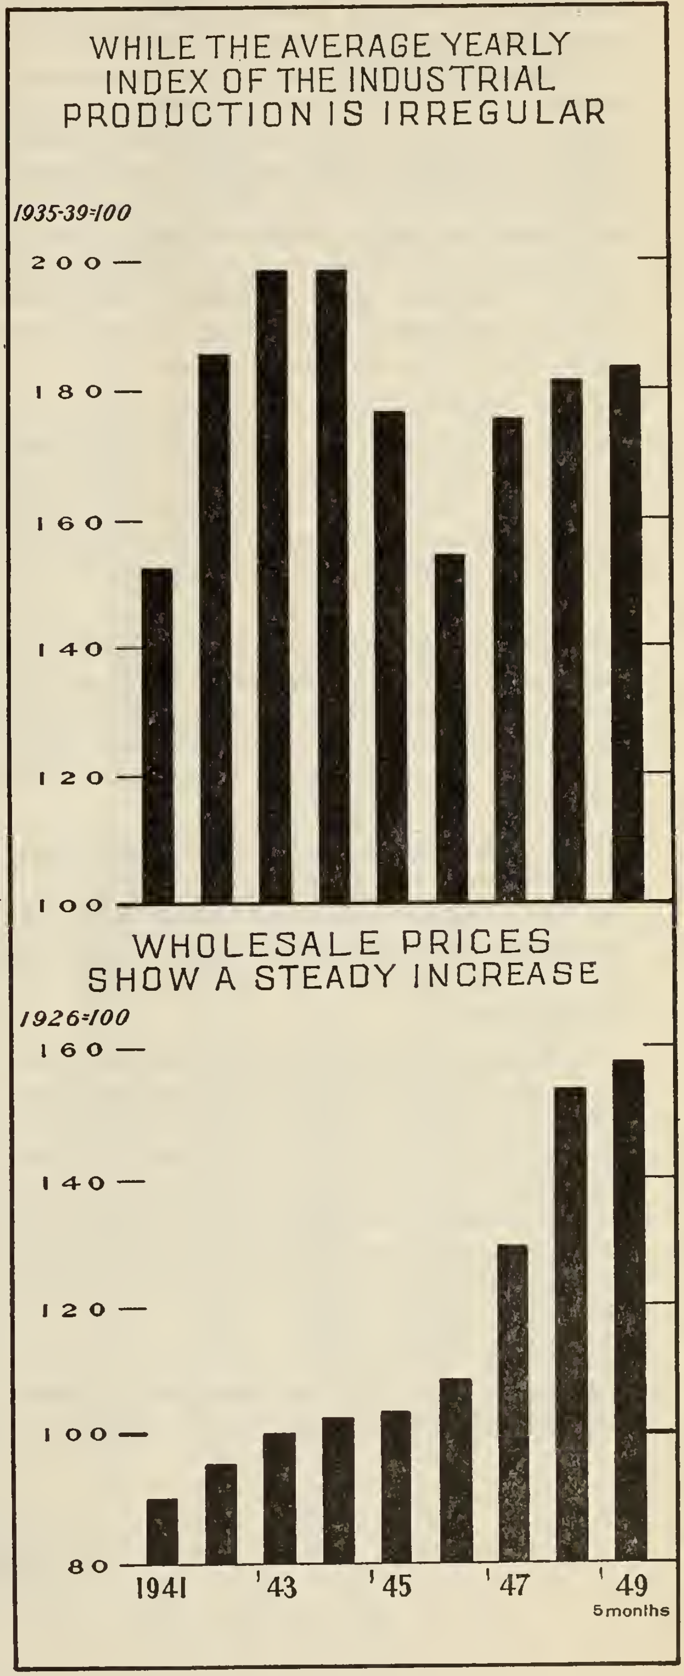
The province's approximately 900 wells now have a capacity of about 100,000 barrels a day but have been choked back to 60,000 enough to satisfy the needs of the territory which can now be economically served. It is estimated that with the addition of more wells and the full operation of those now in partial production that 300,000 barrels could be produced daily by the end of the year 1951. Since more than enough oil is now available to meet the demands of present markets the current boom might well be described as an exploratory rather than as a productive one.

The largest operator in the field now has under construction a pipe line from Leduc to Regina where there is at the moment a refinery which will be enlarged as needed. The company also has tentative plans to extend this pipe line farther east and possibly south into the United States oil thirsty northern middle west. The plan offering greatest economies would be to have eastern Canada continue to draw its oil from U.S. and the Carribean by pipe line and tanker while western United States is served from Alberta. If, however, American tariffs prevent such action there remains the possibility of constructing a pipe line to the head of the Great Lakes and from there transporting oil by tanker to the eastern Canadian consumer points.

Alberta oil seems certain to play a great part in rectifying Canada's dollar shortage since every barrel produced for use in Canada reduces by approximately two dollars Canadian expenditure in the United States and exports, if feasible, would add to our dollar supply.

The province's finances are benefiting directly and immediately from the current oil boom since in the vast majority of cases land was sold to settlers with the mineral rights reserved to the crown. Thus the province enjoys a royalty on all oil produced with the owner of the surface rights to the land below which oil is found being paid flat rentals for acreage used and recompense for any damage suffered from the presence on the farm of the well rigs, pipe lines, etc.

INDUSTRIAL PRODUCTION AND WHOLESALE PRICES



Fluctuations in Price Indexes

The cost-of-living index advanced from 162.1 to 162.8 between July 2 and August 1. In thus advancing .7 it again reached a new high. As in the May to June and June to July advances a rather sharp rise in the subindex on food prices was the main cause of the upward movement. The food index advanced two points, reflecting the higher cost of eggs and some increase in the price of pork products. The fuel and light index and the index of miscellaneous items were also slightly higher with rent holding unchanged and clothing and home furnishings being very slightly lower.

From August 2, 1948 to August 1, 1949 the cost-of-living index rose 3.4 from 157.5. Rather curiously during approximately the same period the United States Consumers' Price Index, roughly the equivalent of the Canadian Cost-of-Living Index, declined 3.0 per cent from 173.7 to 168.5.

The weekly wholesale price index of industrial materials stood on August 26 at 146.2 and the monthly average of this index was 146.5. The comparative figure for August, 1948 was 162.6. There has, therefore been a decline of the 12 months of 9.9 in this index.

The weekly wholesale index for Canadian farm products for August 26 was 145.6 compared with 150.6 for the week ending July 29th. The monthly average of this weekly index was 146.0 for August, 150.9 for July and 151.2 for August, 1948.

The monthly average of the weekly Investors' Price Index stood at 109.2 for August compared with 104.2 for July and 113.6 for August, 1948. The subindexes for the industrials, utilities and banks all participated in the rise from July to August. The mining stock price index also moved higher during the month of August averaging 89.6 as compared with 84.9 for July and 78.7 for August, 1948.

Reversing the upward movements shown since the beginning of this year, factory shipments of Canadian made motor vehicles in July decreased 16 per cent from the high level attained in June, but were 68 per cent above July of last year. During the first seven months of this year shipments advanced 15 per cent over those of the same period of 1948.

July shipments of passenger cars totalled 17,324 units compared with 20,008 in the preceding month and 9,509 in July of last year. The seven months cumulative total of shipments was 104,794 compared with 83,688. Commercial vehicle shipments amounted to 8,059 compared with 10,088 in June and 5,597 in July last year. In the seven months 60,704 commercial vehicles were shipped as compared with 60,600 for the same period of 1948.

Car Loading Advance

Revenue freight car loading for the week ending August 27 were sharply higher than for the previous week at 86,183 compared with 79,171 and 84,995 for the equivalent week of 1948. The gain of slightly more than 7,000 cars was in great part attributable to shipments of grain from those sections of the country where early harvesting operations were in progress. This was the first time this year that the total number of cars loaded had exceeded the 80,000 mark.

The cumulative total for the first 34 weeks of the current year was 2,478,521 cars compared with 2,557,550 in the similar period of 1948 and 2,508,947 in 1947. The decline of approximately 49,000 cars loaded was occasioned by a radical drop in the loadings of pulp wood which fell from 195,563 up to the last week in August, 1948 to 132,394 to the same date in 1949. Grain loadings on the other hand are sharply higher during the present year standing at 215,687 cars as compared with a total of 171,095 for the first eight months of the previous year.

Loadings in the western division are running slightly higher than in the two previous years while the eastern division, reflecting the decline in pulp and paper shipments are below the figures reached earlier.

---

(1)Not applicable to Column 5 "Average hourly earnings".

(2)Annual data as of June 1, monthly data as of August 16, November 8, 1947 and February 21, June 5, September 4, November 20, 1948 and March 5, 1949. (3)See note on page 20.

(4)Prior to 1945, figures shown are those relating to hourly earnings in one week in the month of highest employment (overtime included) reported by manufacturers to the annual Census of Industry. For period beginning in 1945, see table 12. (5)Includes retroactive payments to railway employees.

(6)Conversions are included with annual data only. (7)Includes Newfoundland as of April, 1949.

*Under revision.

[(1)] Personal income is given on an annual basis for months as well as for years.

[(2)] Includes army civilian supply exports from February 1947.

[(3)] Annual totals are averages of end of month figures.

[(4)] Standard and Poor's Corporation. The series currently used represents 416 stocks.

(1) As of June 1. (2) Exclusive of stillbirths. (3) Not applicable to figures on population. (4) Yukon and North-West Territories not included in figures for births, marriages and deaths.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

Note: Newfoundland data are included as of April, 1949. In the first five columns "unemployment assistance" for that Province is disregarded.

(1) Monthly data as of end of month while annual section is based on averages of month-end statistics.

(2) Prior to 1944 data included deferred as well as current vacancies.

(1) Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

(1) As of April 1949, imports of Newfoundland are consolidated.

(2) Annual computation to 1946 entails considerable adjustments in production and external trade as described on page 23 of the Coal Report for 1946.

---

[1] End of period. [2] The production of beer is now shown in thousand barrels of 25 gallons each rather than in million gallons. Commencing with April, 1949, Newfoundland is included.

[3] Includes bottling of imported liquors.

Note: As of April 1949, Newfoundland is included.

(1) Total pulp production was revised where necessary to cover "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

(2) Totals include unspecified pulp.

---

(1) Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

(2) Excluding producers' interchange.

(3) Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

(4) Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December 1946.

(1) The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1)Figures cover the production of firms which normally account for 85 per cent of the total for Canada.

(2)Since January, 1949, includes concrete chimney blocks. (3)Prior to 1947 data on producers' sales were used to indicate production. Annual and monthly production for 1947, 1948 and 1949 are obtained by adjusting producers' sales for changes in inventories.

[1] Hollow blocks including fireproofing and load-bearing tile. [2] Planks and boards.

[3] Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

---

[1] Includes imports to the end of 1947-48 while in 1948-49 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

[2] Figures of customs exports for 1945-46 and 1946-47 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1947-48 are customs exports and will be adjusted when required information is available.

[3] Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption.

[4] Includes customs exports of Canadian oatmeal and rolled oats.

---

(1) Available for January, April and August only. 1948 and 1949 indexes are subject to revision.

(2) Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.

(3) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

(4) Prior to 1941 prices were quoted on a live weight basis.

(5) Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

(1) Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transactions,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

(2) Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board. *See footnote of page 96.

Merchandise Exports by Commodities[1]

Note: As of April 1949, the Trade of Canada includes that of Newfoundland.

[1] Before 1935 totals are overvalued due to the inclusion of U.K. excise taxes on imports of spirits from that country

(1)The annual statistics embrace all steam railways, while monthly data refer to railways with annual operatin revenues of $500,000 or over. (2)Operating income equals operating revenues less operating expense adjusted for tax accruals and rent of equipment and joint facilities. (3)For the Canadian National an the Canadian Pacific, retroactive wage increases, totalling $29,085,087, paid in September, were n included in that month's operating expenses. Payrolls as now reported monthly are according to th new wage scale.

Current Economic Conditions

Undoubtedly the most important influence on world economic conditions during the current year has been the re-valuation of the British Pound and the other currencies of the sterling area in terms of American dollars. Although it is obvious that such action will make it easier for sterling area countries to sell in the United States and more difficult for them to buy from that country there has not yet been time to judge the full effect of the measure.

Canada's decision to reduce the gold value of her dollar to 90 per cent of that of the American dollar in contrast with the approximately 30 per cent devaluation effected by all sterling area countries places this country in a most interesting position. Theoretically, at least, it means that it will be harder than heretofore for sterling countries to buy in Canada but it will not be as difficult as it is now for them to buy in the United States. This may mean that we will increase by an appreciable margin our sales to sterling countries.

On the other hand since sterling and the allied currencies are not as cheap in relation to the Canadian dollar as they are to the American dollar it is possible that British and other sterling exports will not flow into the country with the same ease they reach the United States. Should this theoretically probable result follow it might lead to an increasing imbalance of trade between Canada and those portions of the sterling area (principally the United Kingdom) with which we have already a large favourable balance of trade.

One complication is the fact that some of the sterling area purchases in the dollar countries is financed—either directly or indirectly—through the use of Marshall plan funds, and that the use of these funds to buy other than United States products is forbidden should such products be declared surplus in the United States.

Production Index Declines

The index of industrial production dropped from a peace time high of 189.2 in June to 182.8 in July. The decline is largely, if not entirely, attributable to the increasing habit of factories closing down entirely for a week or two-week period and thus giving holidays to the employees. Although the index is in general seasonally adjusted, sufficient compensation can not be made for this action since data accurate enough to allow for fully correct adjustment are not yet available.

For reasons indicated above the decline was most noticeable in the subindex for manufacturing which fell from 198.8 (also a peace time high) in June to 190.7 in July, with that for non-durable goods manufacturing dropping from 181.3 to 175.6 and that for durables from 228.8 to 216.5.

Other commonly accepted economic indicators fluctuated irregularly during the summer just ended. A survey conducted by the Bureau, the results of which have just been published, indicated that as of June 5 the Civilian Labour Force totalled 5,121 thousand persons. This is the largest figure ever noted in these quarterly surveys. As of the same date the unemployed who were seeking employment amounted to approximately two per cent of the entire labour force. The number of claimants on the live unemployment register was 79.9 thousand persons at the end of July and 80.8 thousand at the end of August. The high, reached during the usual winter lay-off season, was 208.8 thousand for February last.

Railway revenue freight loadings were 8,852 thousand tons in July last and 10,658 thousand tons in August. This 20.4 per cent increase on month to the next is undoubtedly in large part due to early harvesting in Western Canada and a consequent shipment of farm product to market or to storage.

The general wholesale price index at the end of July stood at 156.6 having moved upwards from 156.3 for June. This marks the first monthly upturn in this index following six consecutive minor declines from the all time high of 159.6 reached in December, 1948. The price index of Canadian farm products also moved slightly higher in July to reach 150.9 (both this and the general wholesale price index are calculated on a base of 1926 = 100).

Cheques cashed in clearing house centres had a value of $6,447 million during the month of August compared with $7,017 million for July. It appears probable that the usual seasonal inactivity brought about by holiday time was chiefly responsible for the decline. The index of common stock prices (base 1935-39 = 100) was 108.2 for August and 104.2 for July compared with 99.6 for June last. The last figure was the low point in a movement which had steadily brought this index down from its recent high of 117.8 reached in November, 1948.

U.S. Conditions

Labor relations in some fields in the United States have once more been strained. A steel crisis arose when companies and the union failed to reach a new agreement on conditions for bargaining. The union wants the companies to accept recommendations of the fact finding body, but the companies refuse to be bound by those recommendations and will not agree to any welfare plan that has to be financed solely by the companies. In reply the president of the steel workers states that if companies refuse to agree to a pension-insurance plan recommended by the presidential committee they will strike.

The refusal of operators of southern mines to make Royalty payments to the United Workers Welfare Fund, due to the termination of the contract with the UMW has led to a strike of about 500,000 miners which has resulted in a halt to coal production. The first effects were felt by the Railroads where furlough was given to all extra shop and maintenance employees.

The equivalent of a strike notice has been given to the Ford Company by the United Auto Workers, unless their pension-insurance wage dispute is settled by September 29, and the Ford-UAW contract automatically will be terminated, that has been continuing on a day-to-day basis since July 15. This pension-insurance calls for a $100-dollar a month pension, company financed health and welfare funds, and a cost-of-living increase.

Unemployment was down some for the week ending August 10, as the new claims for unemployment insurance totalled 218,300, which was a drop of approximately 21,000 from the previous week, and the continuing claims also were down by 170,000 from the previous week.

The number of housing starts in U.S. continued to remain above those recorded during 1948, with 98,000 new starts in August this year compared to 96,000 for August a year ago. The 8-month total shows starts for 1948 to be 3 per cent above those for the similar period of 1948, with a greater proportion of the new houses being publicly financed and to be used for rental purposes.

Reports by 13,000 of the large independent retailers shows a decline of 4 per cent in the volume of retail sales from the figure reported a year ago. This figure, however, was 6 per cent above the value of sales reported for the previous month. Motor vehicle dealers were the only group that showed an increase in the volume of their sales over the similar month in 1948.

Canadian Farm Income

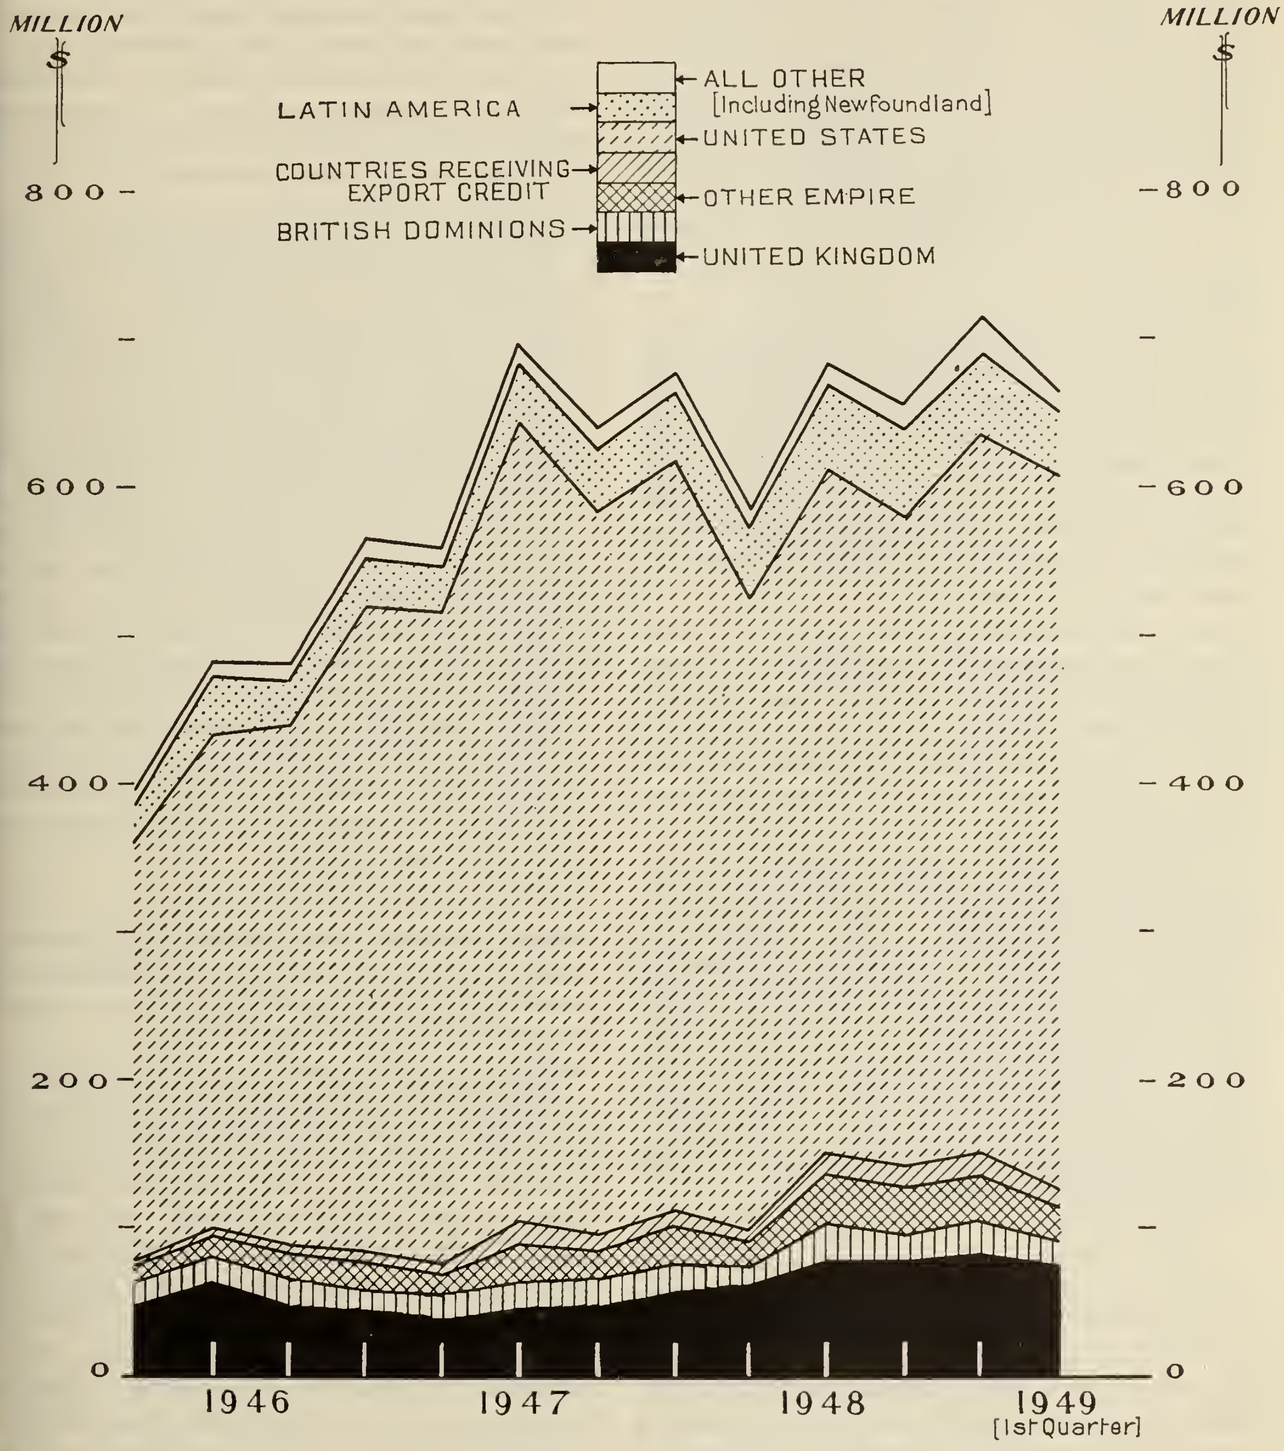
Estimates for Cash Farm Income for the first six months of 1949 for all of Canada (excluding Newfoundland) was $1,056.5 million. This was 14.7 per cent higher than the figure reported for the similar period last year which stood at $921.4 million. In addition to this there was nine million dollars paid out under the terms of the Prairie Farm Assistance Act to farmers in the drought stricken areas of the Prairie Provinces. This was approximately one million dollars lower than paid out for the similar period of 1948.

In a breakdown by commodities it is observed the greatest gain arose from the sale of grain, seed and hay. This accounted for approximately $346 million, with Wheat Equalization and Adjustment payments being the biggest single contributor to this amount. A total of $205 million was paid by the Wheat Board on equalization payments made on all wheat that was delivered by Western farmers from August 1, 1945 to March 31, 1949, and came as a result of the Government announcement, early this spring, of an increase of 20 cents in the initial price of all wheat delivered to the Lakehead, payment being retroactive to the 1st of August, 1945. The increase in the cash income from wheat sales was a result of slightly higher prices and an increase in the total marketings. In contrast to this the increased income from the other grains was a result of increased marketings that overcame the slightly lower prices received by the farmers.

The livestock marketings for the first six months of 1949 totalled $347 million, and this was 9 per cent above the figure reported for the similar period of 1948, which stood at $317 millions. The greatest gain was reported by the cattle and calves group, with higher prices resulting from the lifting of export controls on the shipments of cattle and calves to the United States markets. Even though the prices for hogs were higher for the first six months of 1949 as compared to those in 1948, the decline in the number of marketings caused cash income of farmers to decline 11 per cent from that of a year ago.

MERCHANDISE IMPORTS BY REGIONS

QUARTERLY TOTALS
1946 – 1949



Merchandising and Services Statistics

The conversion of commodities from raw materials to finished products, and the marketing of these goods involves the general processes of production and distribution. While definitions may be formulated which make a clear distinction between these concepts, in practice the functions of production and distribution overlap. The producer and processor assume certain costs of distribution such as transportation, storage, financing of inventories, etc., while the wholesaler or retailer may take on productive functions such as packing, repacking, and the finishing off of semi-ready merchandise.

Distributive functions then, are not performed solely by middlemen or retailers, but are a part of the complex, interlocking, production-distribution system which brings finished goods to the ultimate consumer. By dividing industry into units which engage chiefly either in productive or distributive activities, a practical statistical approach has been made.

The Merchandising and Services Section attempts to measure the rate of flow of goods through the distributive 'pipe-line' and to provide data on costs at each major level. These principal divisions have been made in the statistical series-retail, wholesale and service data.

Complete surveys of sales, stocks and employment in the retail, wholesale and service trades have been possible only by the facilities available at the time of the Decennial Censuses of 1931 and 1941. Descriptions of methods used and results may be found in Volumes X and XI of the census compilations in these years, and summaries of these statistics appear in the 1943-44 edition of the "Canada Year Book" at pp. 527-536, and in the 1945 edition at pp. 596-621 with slightly different emphasis.

Certain phases of distribution are covered completely each year, such as retail chain stores, sales of farm implements and equipment, and motion picture theatres. However, most of the series of current trade statistics depend on sampling techniques which have been refined and stabilized in the past few years. Emphasis will be placed on this phase of merchandising statistics in the following outline of the material available.

Retail Trade Statistics

Sales at the retail level by independent and chain stores are published each month. Total sales in dollars for twenty major kinds of retail business, and an estimate of all other trades are published, broken down into provinces, with the exception of the Maritimes which are grouped together. The bulletin "Retail Trade" contains monthly and cumulative year-to-date sales volume.

The series is based upon a carefully selected sample of retail establishments and was revised from January, 1947. Revisions in sampling methods have given more adequate weight to smaller retailers, and provision has been made for an annual adjustment in sales data to account for changes in store population, such as the building of new store premises or instances in which premises are demolished or no longer used for retailing. Changes in kind-of-business when premises used for one kind of retail trading are changed to another kind will also be accounted for. Correction for these factors in 1947 and 1948 sales will be available late in 1949. Sales figures published to date are estimated from a sample of some 6,500 independent stores which operated continuously from 1941, and from the total sales of chain store firms operating 5,100 stores representing approximately 90% coverage in the retail chain fields.

The revised retail series based on the 1941 Census provides data from 1947 onwards. Trends for a few trades are available for the period 1941-1946, including food, departmental, drug and country general stores.

Total sales by retail stores in 1948 amounted to $7,276,400,000, roughly double expenditures by consumers in these establishments in 1941. A further gain of 7% is evident in the first seven months of 1949 over 1948. Some of the major factors which tend to produce continued gains in sales volume have been price changes, stepped-up production and sales of motor vehicles, reduction in income taxes, continued high levels of personal disposable income, and in the Prairie Provinces particularly, supplementary grain payments and the boom resulting from new oil discoveries.

Departmental Stores

Sales and stocks of departmental firms are published in a separate bulletin which cites total monthly volume of sales and month-end inventories in 18 major departments. These figures include both store and mail order sales. A preliminary monthly release issued 12 days following the month end provides percentage change by regions in department store sales volume. In November, 1948, a special series of weekly reports was introduced reporting percentage changes by regions within a week following the period to which figures apply. These reports are used directly in departmental firms and other retail establishments, in management policy, and are of particular value because they are available within a short time. Since departmental store sales trends are available some time before total retail trade data can be produced, and because there is close relationship between these series, the weekly and monthly departmental bulletins are often used as a rough measure of the total retail trade.

From 1935 departmental store sales have made up roughly 11-12% of total retail sales. In 1941, total departmental store sales were almost $378 million, and by 1948 this had grown to about $805 million. Volume of sales in the first 7 months of 1949 were 9% greater than in the same period of 1948, indicating a slight advantage in these outlets as compared to other retail trade.

Chain Store Merchandising

An annual survey is taken of all major kinds of business in the field of retail chain merchandising. By definition a chain is an organization operating four or more retail stores under the same ownership. Information secured includes number of stores operated, sales, salaries and wages, accounts outstanding, and inventories of stores and warehouses. These principal statistics have been published since 1930.

From 1941 to 1947 the number of chain firms dropped from 529 to 422, and average number of stores operated in the year from 7,622 to 6,696. At the same time total sales volume of these firms rose from about $639 million to over $1,175 million, or about 84%. In 1941 chain store sales absorbed 18.6% of the consumer dollar spent in retail establishments, and in 1947 a slightly smaller proportion (17.9%). Greatest gains in sales volume from 1941 to 1947 were experienced by women's apparel, family clothing, lumber and building material, and liquor store chains.

Motor Vehicle Sales and Financing

Because of the importance of the automotive industry to Canada and the ease of obtaining unit volume, monthly sales of motor vehicles by dealers have been obtained for some years. Although the series was discontinued after 1940, it was taken up again in 1946 when production of vehicles for civilian uses was resumed. Reports are received from head offices or distributing centres, depending on whether vehicles are manufactured in Canada or imported.

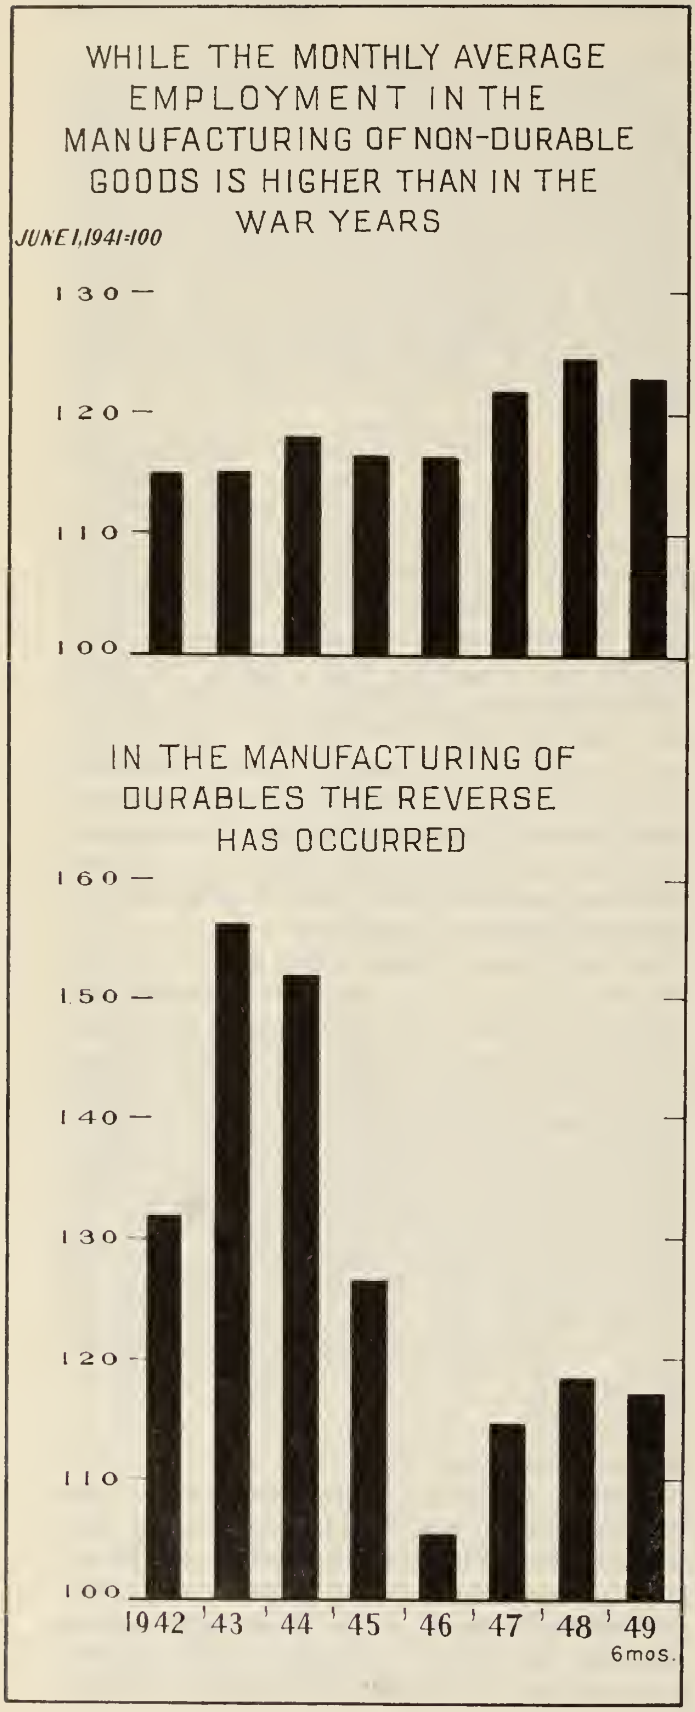
In 1946, the first full year of post-war production, 120,044 new passenger and commercial vehicles were sold for over $193 million, as compared to the pre-war peak year 1937 when 144,441 new vehicles were sold for $149 million. Sales rose to 230,255 units in 1947 valued at $416 million, but in 1948 dropped back to 217,119 units, sold for $421 million. In 1949, however following a period of little activity in late 1948 and early 1949, when retooling for new models was in progress, greatly increased production and an eager market produced a spurt in sales. Sales in the first six months of this year have jumped to 132,780, 23.5% above the same period of 1948. Most of this gain has been in passenger vehicle sales.

In 1941, sales finance companies handling wholesale and retail paper were surveyed as a part of the Census. In the following years only trading in retail automotive finance paper was compiled until 1948 when the broader field of acceptance activity was again surveyed. The most interesting single figure has been the percentage of new vehicles sold which were financed through acceptance companies. In the 1930's the ratio ranged between 32% and 30% but dropped to 19% in 1946. In 1948 the percentage of new vehicles financed rose to 23.4% and in the first half of 1949 was approaching the level of the 30's with a ratio of approximately 28%.

Retail Consumer Credit

Credit regulations, administered by the Wartime Prices and Trade Board were first introduced in October, 1941, and with alterations to suit current conditions were maintained until January, 1947. These controls were intended to reduce demand for consumer goods largely by setting minimum down pay-

EMPLOYMENT IN MANUFACTURING



ments, by shortening the period of repayment of instalment receivables. To observe the effect of controls on retail consumer credit, the Wartime Prices and Trade Board conducted surveys of credit operations which were regarded as valuable indications of this phase of the retail trade. Interest in these statistics by business and government alike was sufficient to warrant the continuance of the survey by the Dominion Bureau of Statistics.

The early series by half years from the latter half of 1945 was based on a stratified sample of stores in 10 kinds of retail business, covering cash, charge account, and instalment sales, charge account and instalment receivables. In 1948 the survey was placed on a quarterly basis, and the number of component trades raised to 16 to effect a wider coverage of charge account dealings.

In 1941, in the 16 trades included, about 61% of sales were for cash, 11% on conditional instalment plans and 28% through charge accounts. By the latter half of 1945, the proportion of cash sales had risen to 67% and in the following year fell off until in the first half of 1948 cash sales were 63% of total sales. There has been some shift from instalment sales to charge account sales in the 1941-1948 interim. In the last quarter of 1948, the index of credit sales (1941 = 100) had risen to 204.1, but the index of combined charge account and instalment receivables had reached only 145.0. In almost all trade for which credit figures are available, the increase in credit sales was greater than that in accounts receivable. Interpreted in terms of number of days credit outstanding (the ratio of credit sales to receivables for any given period) merchants have been able to collect credit accounts over considerably shorter periods than in 1941, the base year.

The figures would indicate that the current high level of retail sales has not been inflated by undue extension of credit to consumers. Indexes of accounts receivable show clearly that collection on accounts receivable are more rapid than in 1941.

Wholesale Trade

Current information on the wholesale trade is limited to sales and inventories of wholesalers proper, and omits agents, brokers and commission houses. The survey is restricted also to those firms engaged chiefly in servicing the retail trades.

Monthly index numbers for nine trades extend back to 1935, and at present are published within six weeks following the end of the month to which the figures apply. The sample includes all of the larger wholesale firms with a smaller proportion of smaller houses. The reporting firms accounted for 68% of all business done in the given trades at the time of the 1941 Census of Merchandising and Service Establishments. Other major types of wholesale operations include manufacturers' sales branches and offices, petroleum bulk tank stations, agents and brokers, and assemblers of primary products. Explanations of these terms and volume of business in the census year may be found in Volume XI of the 1941 Census.

Total sales of wholesalers proper in 1941 amounted to $2,358,475,000. In 1948 the dollar volume of wholesale sales in Canada for the nine lines of wholesalers proper in the survey was 99% above 1941 levels and was 183% above the base period for the index series (1935-1939 = 100).

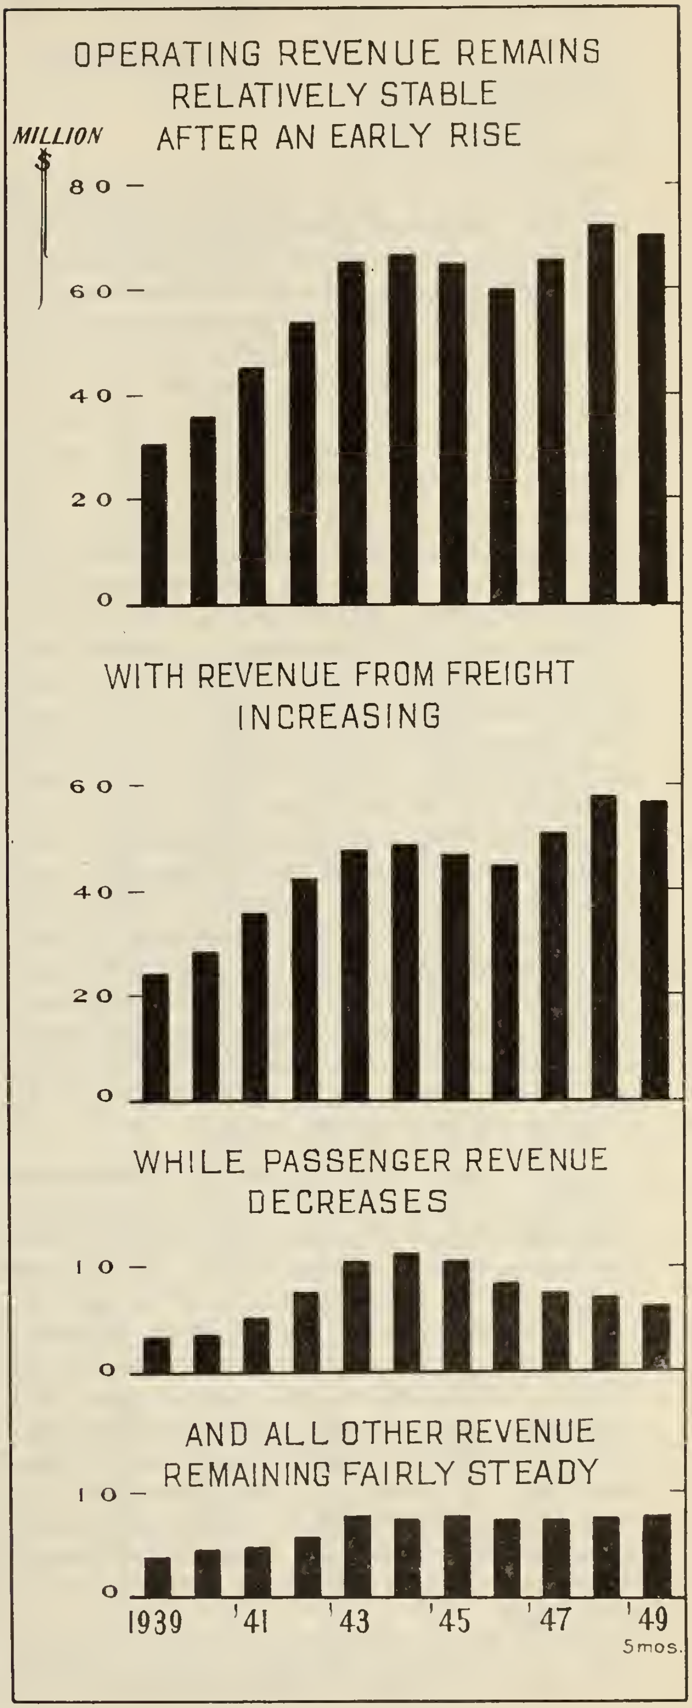
The composite index for the nine wholesale trades based on the first seven months of 1949 was 4.3% above the same period in 1948, while inventories were valued about 8% higher. In 1949, clothing, dry goods and footwear wholesalers have dropped back to 1948 levels or lower. The overall increase was sustained by heavy increases of fruit and vegetables, drug and automotive wholesalers. Regionally, the Prairies have reflected the prosperity resulting from income and oil developments, with little change from 1948 in the east and west areas.

Motion Picture Theatres

Statistics on motion picture exhibitors and distributors were first compiled for 1930, in connection with the first complete census of merchandising and service establishments. With the exception of 1931 and 1932, data on receipts, attendance, film types, seating capacity, amusement taxes, employment, salaries and wages have been secured each year. All known theatres and film distributors are included.

In 1930, there were 907 theatres, excluding legitimate play houses with total receipts of $38.5 million. By 1933, with the recession of business activity the number had dropped to 759, and total receipts to about $25 million. From the 1933 low, number of theatres, paid admission and receipts have shown annual gains. In 1948 there were 1,917 theatres,

CANADIAN RAILWAY REVENUE



222,307,140 paid admissions and total receipts of $69.6 million, as compared with 1,236 theatres, 161,677,731 paid admissions and total receipts of $40.8 million in 1941. Per capita attendance grew from 14.1 per year in 1941 to 17.3 in 1948.

Operating Costs Survey

Requests for studies into the expenses involved in operating wholesale and retail business have come from industry and government alike. While certain phases of operations such as gross margin, salaries, and wages, etc., were surveyed in connection with annual surveys of the distributive trades in the 30's, the first comprehensive studies covering all major expense items in most trades have been undertaken in the last few years.

Publications dealing with operating ratios have been directed to, and are intended primarily for the use of, the merchant who may compare his store operations to the averages for his kind and size of business, to provide estimates of the contribution to national income by unincorporated retail stores, and to assist the prospective entrant into the retail trade in assessing his prospects for success. Following studies in 1944 and 1945 on 23 major retail trades, the 1946 bulletins introduced a case study which outlined the background and operating ratios of a particular retailer and described how average figures could be employed in planning toward increased efficiency. Methods of operation which involve such items as store, layout, advertising display, packaging and salesmanship were considered beyond the scope of this work. Surveys are based on stratified samples of establishments.

Expense and profit ratios of independent retailers in 23 kinds of business have been published in a set of six bulletins each of which contains groups of related trades. In addition to inventories, stock turnover, gross and net profit margins, operating expenses analyzed include employees salaries and wages, advertising, store supplies, bad debts, taxes and insurance, rent, light, heat, maintenance, and depreciation. Breakdowns by size of business and by owned or rented premises are available for most trades. A summary of operating expense ratios in independent retail stores appears at p. 826 of the 1948-49 Canada Year Book.

In 1947 Retail Chain Stores were surveyed for operating costs for the first time by the Bureau. Coverage was on a complete basis in ten major chain trades, and results were published in 3 bulletins which contain related groups of trades,—food, clothing and miscellaneous.

Because of the more detailed accounting methods in larger firms, it was possible to report many expense categories which could not be isolated in independent retail operating costs studies. In certain instances a breakdown of head office and warehouse expense and store expense was made. Results of these studies may be found in the bulletins mentioned above.

Although studies of operations in the wholesale dry goods and hardware trades were made in 1938, the first comprehensive survey of wholesalers proper was made for the year 1947. Ten major trades were included, and all known firms in these categories were asked to co-operate.

In general, operating ratios were divided as between selling, warehouse and delivery, and general and administrative expenses where satisfactory reports were received. Special requests for the survey were received from trade associations, and wide interest in the wholesale trade has followed its publication. Results may be seen in the three bulletins in the series "Operating Results of Wholesalers".

Conclusion

The work of the Merchandising and Services Section is as yet in a developmental phase, but the end in view has been formulated. For the benefit of business, education and government, the goal is the filling in of the pattern of distribution statistics so that flow of goods, sales, inventories and distribution costs at each level of distribution are known. Methods of sampling and the place of various statistical series in the economy are constantly under examination. Special effort has been devoted to the wider circulation of reports which can be used directly in the formulation of merchandising policy. The need for attractive, clear and readily understood presentation is recognized.

The Census of Distribution in 1951 will cover all phases of retail, wholesale and service business. Plans are now under way for this major project, and consideration is being given to the revision of distribution statistics following the census, to achieve maximum value to all users.

---

(1) Personal income is given on an annual basis for months as well as for years.

(2) Includes army civilian supply exports from February 1947.

(3) Annual totals are averages of end of month figures.

(4) Standard and Poor's Corporation. The series currently used represents 416 stocks.

(1)As of June 1. (2)Exclusive of stillbirths. (3)Not applicable to figures on population. (4)Yukon and North-West Territories not included in figures for births, marriages and deaths.

(5)Newfoundland data are included as of June 1, 1949.

Note.—Until the end of 1947, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. Monthly figures for 1947, 1948 and 1949, and annual figures for 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1) Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

---

(1) As of April 1949, imports of Newfoundland are consolidated.

(2) Annual computation to 1946 entails considerable adjustments in production and external trade as described on page 23 of the Coal Report for 1946.

Note: As of April 1949, Newfoundland is included.

(1) Total pulp production was revised where necessary to cover "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

(2) Totals include unspecified pulp.

[1] Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

[2] Excluding producers' interchange.

[3] Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

[4] Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December 1946.

---

(1) The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1) Figures cover the production of firms which normally account for 85 per cent of the total for Canada.

(2) Since January, 1949, includes concrete chimney blocks. (3) Prior to 1947 data on producers' sales were used to indicate production. Annual and monthly production for 1947, 1948 and 1949 are obtained by adjusting producers' sales for changes in inventories.

(1) Hollow blocks including fireproofing and load-bearing tile. (2) Planks and boards.

(3) Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

(1) Includes imports to the end of 1947-48 while in 1948-49 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

(2) Figures of customs exports from 1945-46 to 1947-48 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1948-49 are customs exports and will be adjusted when required information is available. (3) Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption. (4) Includes customs exports of Canadian oatmeal and rolled oats.

(1) Available for January, April and August only. 1948 and 1949 indexes are subject to revision.

(2) Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.

(3) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

(4) Prior to 1941 prices were quoted on a live weight basis.

(5) Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada. Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies. Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments".

(1) Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transactions,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

(2) Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board. *See footnote of page 96.

Merchandise Exports by Commodities(1)

Note: As of April 1949, the Trade of Canada includes that of Newfoundland.

[1] Before 1935 totals are overvalued due to the inclusion of U.K. excise taxes on imports of spirits from that country.

---

(1) The annual statistics embrace all steam railways, while monthly data refer to railways with annual operating revenues of $500,000 or over. (2) Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities. (3) For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling $29,085,087, paid in September 1948, were not included in that month's operating expenses. Payrolls as now reported monthly are according to the new wage scale.

Grand Total Disbursements	2,336.1	87.5	188.0	256.2	178.7	161.9	704.3	614.4

Beginning in July 1949, certain advances that were formerly classified under "Miscellaneous Loans and Advances" are now included in the new category "Working Capital Advances to Crown Corporations". This account does not appear on the monthly statements. Revised figures on the new basis are not yet available for April, May and June 1949. The data for the corresponding month of the previous fiscal year are comparable to those for the current year.

(1)Does not include advances to Foreign Exchange Control Board which are equivalent in substance to cash balances either in Canada or abroad, nor temporary investment of surplus cash in the Government's own securities. (2)Includes assumption of Newfoundland guaranteed stock of $71,709,459.

Note: Credit items are due to repayments and transfers between departments and classes of expenditure.

Special Survey Operations

The Special Surveys Division of the Bureau of Statistics as its basic function conducts the sampling operations and compiles the quarterly estimates of the Canadian civilian labour force. A discussion of the methods used, the results obtained and the uses to which these are put appeared in the April, 1948, issue of the *Canadian Statistical Review*. The Division, however, also conducts periodic special surveys to obtain statistics on topics of current interest and it is these collateral operations of the Division which will be discussed in this article. Since these subsidiary surveys are usually made in conjunction with the labour force survey and from the same sample, some preliminary discussion of the major survey and the sample used are necessary.

The need for up-to-date information on the state of employment and unemployment in Canada had long been recognized by provincial and federal government departments, by labour unions and by various employer groups. One of the post-war projects for improved statistics was the institution of the labour force survey. It was obviously impossible to do a complete count of the population as is done in the decennial census. The time required to process such a large amount of information into intelligible data would make the statistics obsolete before they were available for use. In addition, the purpose for which the information was required did not demand the high degree of accuracy assured by an actual count. These conditions indicated the desirability of a sampling technique which would provide estimates within known limits of accuracy, at a minimum of expense, time and inconvenience to the public. It was to meet these conditions that the labour force sample was designed and the first survey conducted in the fall of 1945.

Sample Design

Since the primary purpose of the sample was to provide data on the labour force, that sample design which would most efficiently supply this had to be chosen. It was determined that the method known as "area sampling", essentially the enumeration of all individuals residing in randomly selected areas, offered the greatest advantages.

The first problem was to decide what size of sample would be large enough to give the needed precision and at the same time small enough to permit ease of administration, prompt tabulation and publication of results, with reasonable cost. It was decided that a sample covering one per cent of the households would meet these conditions satisfactorily, and in addition be large enough to provide reliable information on topics other than the labour force for which it was primarily intended.

A degree of geographic concentration had to be determined that would keep both the cost of enumeration and the variance of results at a minimum. The final sample design incorporated varying degrees of concentration depending on the locality. The country was divided into two major categories; (1) cities with a population of 30,000 or over in the 1941 census and; (2) rural areas and urban places of less than 30,000 persons. Each city of 30,000 or over was declared a primary sampling unit. Then the selected area of each province outside these cities was divided into primary sampling units, which were later stratified on the basis of similarity of industrial, agricultural or population characteristics. Because of inaccessibility and high cost of enumeration, certain remote areas and Indian reservations were excluded from the sample. These areas contain about two per cent of the population and the labour force estimates are not considered to include them. With this exception all members of the population have an equal chance of inclusion.

The primary sampling units were constructed so as to be as heterogeneous as possible. After stratification, one primary sampling unit was chosen by random selection from each stratum to represent that particular group. The next stage in geographic concentration was to select certain segments for enumeration within each primary sampling unit that had fallen into the sample. It was decided to use 1941 census sub-districts for segments since they were the smallest areas for which 1941 population figures were available.

Since each primary sampling unit was originally constructed to contain as many different types of areas as possible, it is easily seen that a purely random selection of segments to be enumerated within a primary sampling unit might result in the omission of some population characteristics and the over representation of others. To avoid this possibility, substratification was introduced, each substrata consisting of segments having similar urban, rural farm or rural non-farm characteristics.

Within each substratum segments were selected within which enumeration was to be concentrated and within the segments individual households were chosen to yield a one per cent sample. In rural areas where the distance between households was great segments were frequently divided into smaller areas called clusters before individual households were selected. At all stages selection of units for enumeration was made at random.

In the metropolitan areas of 30,000 or over city directories were used in the setting up of sample blocks from which those to be enumerated were chosen.

The household is the ultimate unit of enumeration. One-quarter of the households enumerated are dropped from the sample after each quarterly survey and replaced by others in the same district. Thus no household is enumerated more than four times. Respondent resistance is in this way kept to a minimum and at the same time the continuity of the estimates is maintained.

One of the benefits of area sampling is that it automatically reflects movements of population. For example, since one per cent of the urban and one per cent of the rural areas are drawn at random, a shift of population from country to city or vice versa will be recorded by the enumerators covering the sample.

The Labour Force Surveys

The labour force survey gathers quarterly information on the activity of the non-institutional civilian population 14 years of age or older during a specified week. This population is divided into two broad groups: those within labour force and those outside of it. The latter group is classified according to whether its members' major activity was keeping house, going to school or college, retired or voluntarily idle, too old, or permanently unable to work. A further sub-division indicates the region of residence, the sex and age group of the non-workers.

Those persons within the labour force e classified as employed (including those who hd a job or business but for one reason or anoth were not at work during the survey peri and the unemployed. Estimates of the e ployed are given by region, sex, age, hou worked, industry, occupation, and occu tional status. Special estimates are also ma of the marital status of employed women a the number of women employed in domes service.

Estimates of unemployment are given y region, sex, age and length of unemploymen

Housing Surveys

Each month the housing section of t Special Surveys Division of the Bureau carr s out, with the co-operation of the Cent l Mortgage and Housing Corporation, a Don nion wide survey of residential constructio. In this survey the Central Mortgage and Hou ing Corporation by actual count determir s each month the number of dwelling units which construction has been started and t number completed in all cities and tow having a population of 5,000 or more. T data thus gathered is turned over to t Bureau by the corporation for compilatio. Simultaneously the Bureau of Statistics, usi as a base a sample completely independe from that used for the labour force and oth surveys, estimates the "starts" and "compl tions" in the rural and smaller urban areas.

The material obtained from the corporation count and the Bureau's estimate forms t basis on which is founded the Bureau's mont ly report on housing construction.

Several other aspects of the housing cond tions of the population of Canada have been su veyed by the Special Surveys Division. Almo immediately after the war's end a survey w made of the doubling up of families in sing dwelling units. Further, households we classified by the number of rooms and t number of persons occupying them, th revealing the density of occupation as well the incidence of overcrowding.

More recently a continuing survey of ren has been undertaken in order to provide u to-date and accurate data for this compone of the cost-of-living index. A survey was al made of landlords and mortgages to provi the basis for estimates for what had hitherto been a gap in the national accounts of income and expenditure.

Typical Special Surveys

At the request of the Department of Agriculture a survey was made in June, 1947, to determine the frequency of fires and non-fatal accidents on Canadian farms. The survey revealed, among other things, that farm accidents caused over a million man-days loss of time from productive work and that the incidence of accidents on farms was most heavy during the month of May.

Again at the request of the Department of Agriculture a survey was undertaken in certain parts of the country to determine the use and availability of apples and apple products such as canned apple sauce, canned apple juice, dried apples, etc. The purpose of such a survey was of course to determine if such products were being adequately merchandized in the surveyed area.

In August, 1947, a survey was undertaken to determine the types of heating equipment and fuel used in Canadian homes. Since approximately half of all households have more than one type of heating equipment the survey distinguished between the principal and the supplementary equipment and fuel. Based on the results of this survey a detailed analysis of the use of oil as a domestic fuel was prepared to meet the great interest in this source of heat.

Other special surveys have been conducted to determine the number of households equipped with radios, refrigerators, vacuum cleaners, washing machines, etc.; fish consumption; the number of poultry on farms; the labour force status of veterans; and other matters of similar import.

It should be here mentioned that not all the surveys conducted by the sampling unit have resulted in Bureau publications since in some cases the data gathered while of great technical value is not of general public interest.

Inter-Bureau Checks

Another field in which the sampling unit has been called upon to provide assistance is in assessing and improving the quality of statistics originating in other divisions of the Bureau. For example, the completeness of census enumeration has been checked by a special supplementary survey in the Prairie Provinces, carried out simultaneously with the Prairie census of 1946. Another survey, conducted as part of one of the regular quarterly operations, was used in connection with the monthly returns on employment, hours of work, and wages provided by employers. This survey obtained, in addition to the industry in which each person enumerated was working, the name of his employer. The results were then collated with the employer's regular returns, thus increasing the usefulness of the data from both sources by fitting them into one another.

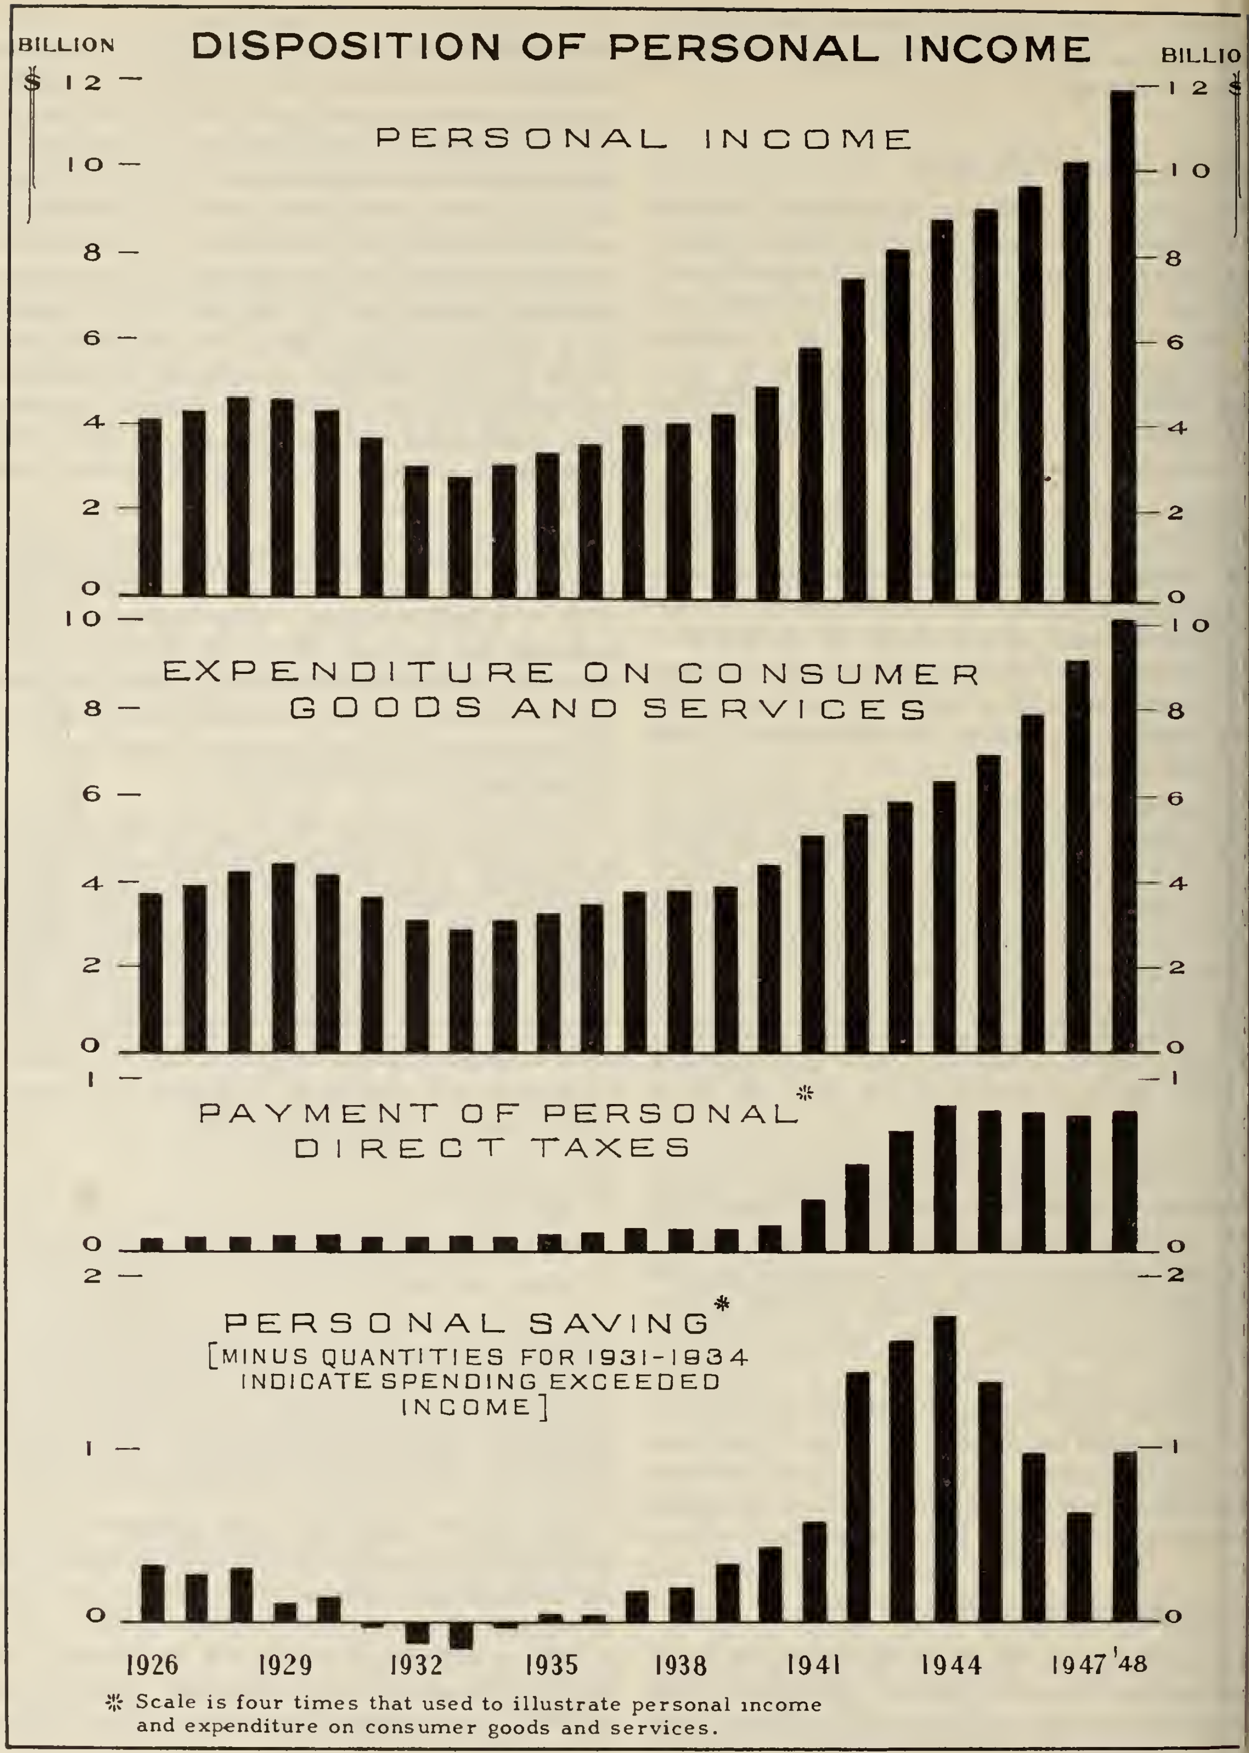
The Sampling Unit also helped in the setting up of a new system of current estimates in the field of merchandizing. Wholesale and retail stores in ten per cent of the urban census subdistricts and five per cent of the rural ones were listed in order to secure a sample of new outlets to supplement the complete enumerations carried out in the 1941 census.

In connection with the annual estimates of population, the Special Surveys Division has provided estimates of inter-provincial migration. For this purpose questions about children under fourteen years were included and the sample was increased from one to two per cent. The figures on migration thus obtained have been incorporated in the provincial population estimates and thus help to improve the accuracy of the surveys themselves.

Conclusion

The statistics gathered by the Special Surveys Division are used by many Dominion government departments and branches, including in particular the Bureau of Statistics itself, by provincial governments, by private manufacturers and industrialists, by employer and employee organizations, and by economists and other students of the Canadian economy.

The use of sample surveys enables the ten-year period between censuses to be bridged with up-to-date information, the reliability of which is within definite and known limits. The sampling technique provides a flexible and efficient instrument for collecting information quickly, economically and with a high degree of reliability.



DISPOSITION OF PERSONAL INCOME

* Scale is four times that used to illustrate personal income and expenditure on consumer goods and services.

Current Economic Conditions

A majority of the main factors which indicate economic activity continued to show increases when compared with the corresponding period of the previous year. Cheques cashed rose 12.3 per cent in August, 1949, as compared with August, 1948. The index of industrial production stood in August at 178.4, down, due in large part to the holiday season, from the spring highs, but higher than the August, 1948, figure of 175.6.

The index of industrial material prices, which in the week ended August 26 stood at 146.8, rose for the week ended September 23 to 148.8. Higher quotations were recorded for such items as lead, zinc, iron ore, raw rubber and gum rosin while lumber, hogs and cotton seed oil were somewhat easier. From a peak of 163.2 for the last week of August, 1948, this index moved irregularly until January, 1949, and thereafter worked gradually lower until a temporary bottom was reached in the third week of July at 145.7. Despite the subsequent rise of 3.1 points it is still 8.4 per cent below the figure reached in the corresponding week of 1948.

Common stock prices advanced and bond yields declined slightly during the month of September but dividend payments increased 6.5 per cent in August over the figure for the same month a year ago, according to a compilation made by the *Financial Post*.

Dollar sales of wholesalers in August, 1949, were 7 per cent above the dollar value in August, 1948. Cumulative sales for the first eight months of the current year were 5 per cent in excess of those for the corresponding period of 1948. The general unadjusted index of sales (base 1935-1939 = 100) stood at 316.0 for August, 1949 and 296.7 for August, 1948.

Railway revenue freight car loadings during the month of August totalled 351,000 as compared with 344,000 for August, 1948. The cumulative total for the first eight months of the year was 2,521,000 cars while the figure for the same period in 1948 was 2,608,000. Despite this drop in cars loaded the actual tonnage carried was higher, the figures being 71,731,000 tons in the first eight months of this year and 71,069,000 tons in the first eight months of 1948.

National Accounts

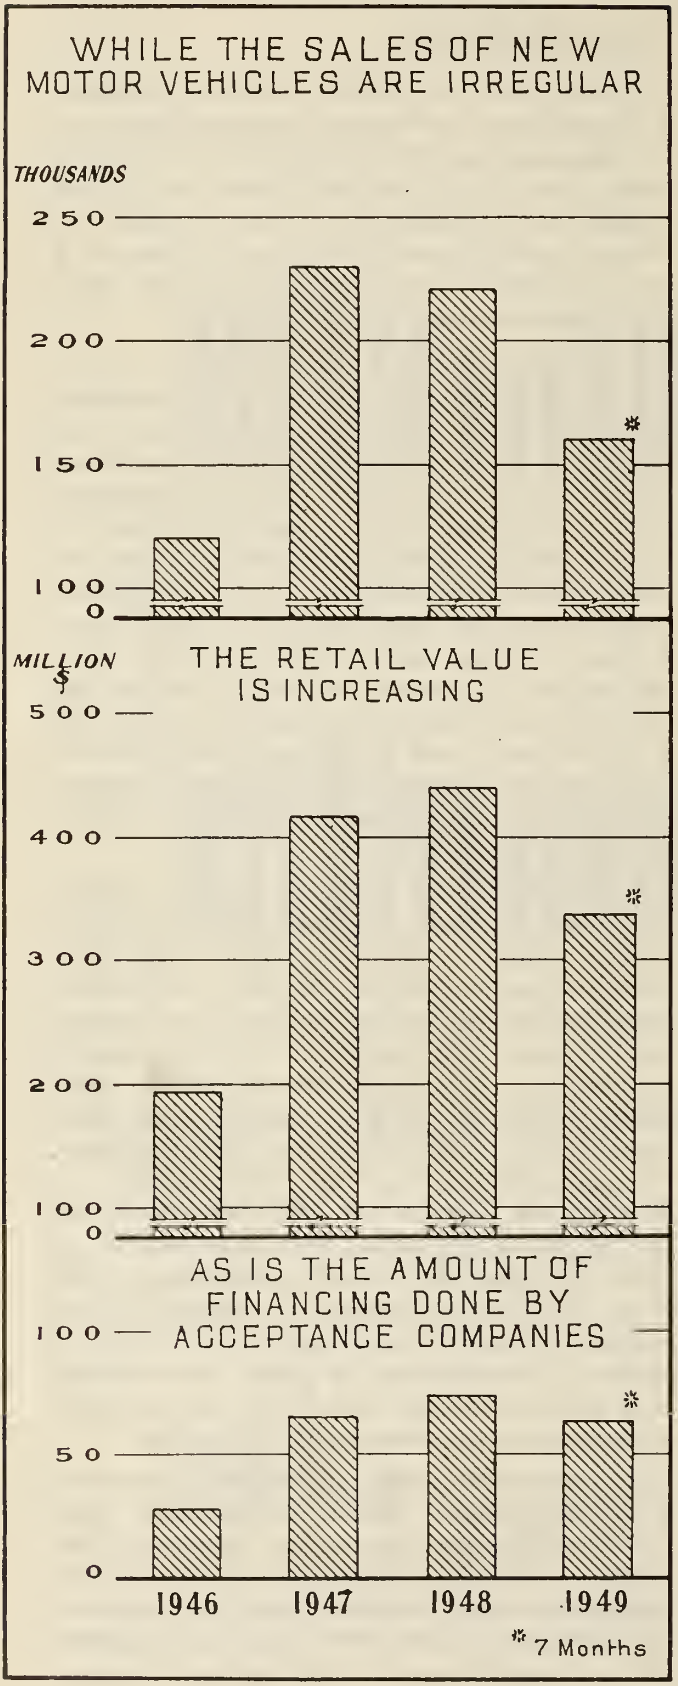
The value of Gross National Product, according to an estimate recently published by the Bureau, was $15,450 million in the year 1948. This is 13.7 per cent above the $13,591 million for the year 1947 which in turn was 13.8 per cent higher than the 1946 figure of $11,936 million. Price rises were more influential than volume in these increases.

Wages, salaries and supplementary labour income (this includes payments by employers into retirement funds, unemployment and other insurance schemes, etc.) was the largest single item in the national product amounting to $7,113 million, 14.5 per cent above the 1947 total of $6,212 million, and almost double the 1941 figure of $3,586 million. The item does not include military pay and allowances which during the year under review amounted to $82 million. Payments of wages, salaries and supplementary income by governments (federal, provincial and municipal) amounted to $740 million exclusive of payrolls of governmental business enterprises such as the C.N.R., the hydro systems, etc.

Personal income totalled $11,883 million, 14.9 per cent above the 1947 figure of $10,345 million which in turn was 7.0 per cent above the 1946 total of $9,670 million. Individuals spent $10,083 million on the purchase of goods and services, $813 million in the payment of personal direct taxes, primarily income taxes which amounted to $717 million, and made personal savings in the amount of $987 million. This savings item was more than double the $428 million reached in 1947, but far below the record saving of $1,708 million reached in 1944. The purchase of food, including the cost of meals eaten in restaurants, absorbed $2,796 million or slightly more than one-fourth of all personal expenditures on goods and services, with the next largest item being the purchase of clothing to the value of $1,325 million.

Governmental income for 1948 was estimated at $3,961 million while expenditures were $3,143 million, leaving a record surplus of $818 million. Interest payments on public debt amounted to $554 million while the purchase of goods and services from business accounted for the expenditure of $851 million, approxi-

SALES AND FINANCING OF NEW MOTOR VEHICLES



mately one-third of the all time high reached i 1942 when under stress of war $2,523 millio was so spent. Transfer payments to individuals that is payment of such items as old age pensions, unemployment insurance, family allowances, etc., amounted to $843 million.

Labour Income at New High

A recent estimate made by the Bureau o Statistics places total Canadian labour incom for July, 1949 at $651 million. This figure shoul be considered the all time high monthl income since, although the September 194 estimate reached $664 million, it include retroactive payments to railway workers i excess of $30 million.

Estimates of labour income include all wages salaries and supplementary remuneration fo employees' services. Salaries and wages include bonuses and commissions and ar reckoned before deductions for income ta or any other payments. Supplementary labou income consists of all other employer expenditures either in cash or in kind which can b regarded as compensation for the employees services. This includes such items as employers' contributions to unemployment insurance, clothing or living accommodation o payments in lieu of them and similar benefits The current July figure is $8 million above tha of June and $44 million above that of July 1948. It was not until 1942 that labour incom reached a mark of $300 million a month.

Construction showed a $4 million increas over the previous month due in large part t continued high employment in the buildin and highway construction fields. Labou income in agriculture, transportation, communication and storage and services wa also considerably higher. These advances wer of a seasonal nature, particularly in agriculture where both the numbers of hired worker and the rates of pay increased. Partly counterbalancing these gains were losses, whic occurred in manufacturing and forestry.

Another factor contributing to the highe level of labour income was the decrease in man days lost through strikes and lockouts. According to preliminary figures of the Department o Labour only 57,744 man-days were lost due t these causes in July last as compared wit 141,084 in June. The settlement of the majo rike in the asbestos mining industry was flected in the increase in labour income in the ining industry as a whole.

The over-all index of employment in the nine ading non-agricultural industries showed a actional increase from 130.8 on July 1 to 30.9 on August 1. At the same time the verage weekly earnings for the same industries ncreased from $42.92 on July 1 to $42.99 on ugust 1.

ousing Construction Advances

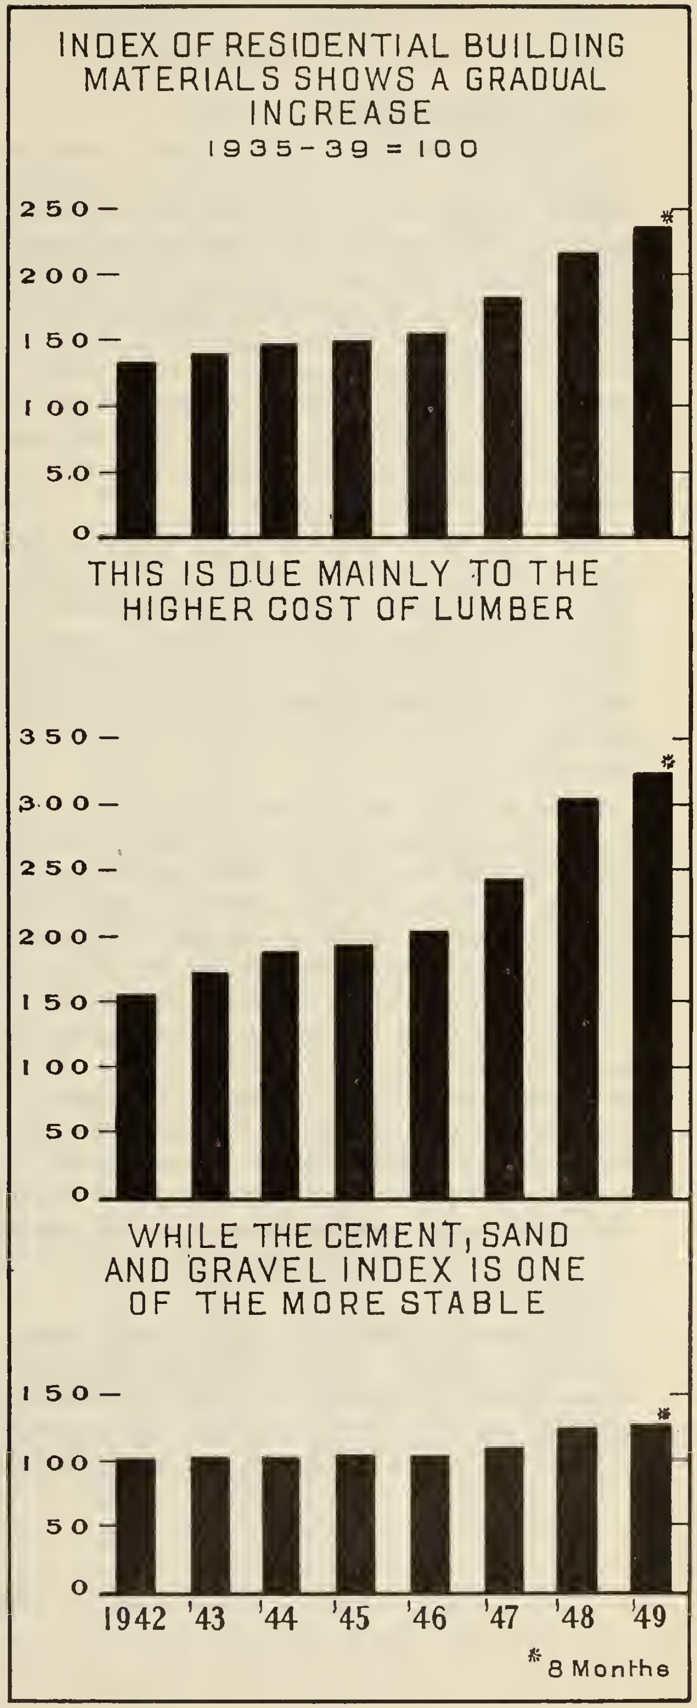
An estimated 6,588 dwelling units were completed in Canada during the month of July 1949. This brought the completions for the irst seven months of this year to 46,326. The omparative figures for the previous year were 6,073 completions in July and 36,601 for the first seven months. These estimates are the results of a nation-wide survey conducted by the Bureau of Statistics with the co-operation of the Central Mortgage and Housing Corporation. An explanation of the methods used in making the survey is contained in the article appearing on page 1 of this issue of the *Canadian Statistical Review.*

Construction was started on a further 9,086 dwelling units during the month of July as compared with 9,684 "starts" in the same month of 1948. The seven month totals were 49,285 "starts" during the current year and 49,452 during the same period of the previous year. At the end of the month there were still under construction a further 59,203 units, the comparable figure for a year earlier was 55,686.

It is estimated that approximately 30 per cent of all dwelling units completed during the current year were built for rental purposes with the remainder designed for owner occupancy. During the year 1948, 25 per cent of all dwelling units completed were intended for rental.

For the purpose of this survey the count of dwellings which are started, completed and under construction includes only new residential construction intended for year round occupancy. Seasonal dwellings such as summer cottages, ski shacks, etc., are not counted. Dwellings which are occupied, even if unfurnished, are regarded as completed. A dwelling unit is defined as the living quarters

BUILDING MATERIALS COSTS



occupied by one household or family. The number of dwelling units in a structure will, therefore, be the number of households the structure is intended to accommodate.

Eight Months Foreign Trade

During the month of August, 1949, Canadian imports from all countries were valued at $212.1 million with exports valued at $251.7 million. Allowing for the re-export of foreign goods there was a resultant balance of trade of $41.9 million. The cumulative figures for the first eight months of this year were: imports, $1,872.4 million and exports, $1,917.6 million with a favourable balance of $83.7 million. It is rather interesting to note that almost exactly half the favourable balance was built up during the month of August.

The comparative figures for the first eight months of the year 1948 were: imports, $1,695.8 million and exports $1,875.2 million with a favourable balance of $197.2 million. Imports increased in the eight months of 1949 approximately 9.3 per cent above those of the similar period a year earlier and exports increased 2.3 per cent.

Imports from the United Kingdom in the first eight months of this year had a value of $218.3 million, up 13.3 per cent from the $193.2 million figure for the same period of last year. Exports however, reflecting in part the British effort to avoid where possible purchases in the dollar area were valued at $469.0 million, down 1.1 per cent from the $474.3 million worth of goods shipped January to August of 1948. It is, of course, too early to observe any change in trade trends resulting from the recent devaluation of the pound but it is reasonable to assume that the lowered values in dollar terms will result in an increased flow of British goods into this country during the remainder of the current year.

Purchases by Canada of United States goods increased sharply in the eight-month period under review. These had a value of $1,312.6 million, up 11.2 per cent from the $1,180.1 million figure reached during the same period a year earlier. The removal, during late 19 and early 1949, of many of the controls an restrictions on imports from the United Stat contributed to this rise in the value of import Canadian exports to the United States wer during the same period valued at $910.6 millio as compared with $878.9 million a year earlie an increase of 3.6 per cent.

An indication of the importance of the Unite States and the United Kingdom in Canada foreign trade position is to be found in th fact that during the first eight months of th year 70.9 per cent of all our imports wer brought from the United States with a furthe 11.8 per cent being purchased in the Unite Kingdom. During the same period the Unite States purchased from Canada 47.5 per cen of all our exports with an additional 24.5 pe cent of them going to the United Kingdom.

Turning to consideration of the type material traded in it is observed that export during the eight months of wood, wood products and paper were valued at $555.5 millio Of this amount the sale of newsprint realize $277.5 million or almost half the total. Agricultural vegetable products followed wit exports worth $487.4 million with wheat a the largest single component, sales of thi grain amounting to $283.4 million. Export of non-ferrous metals and their products a $288.9 million, iron and its products at $201. million and animals and animal products a $189.9 million were the remaining large item in our export list.

Imports of iron and its products valued a $634.4 million accounted for slightly more tha one-third the value of all imports during th eight month period with non-metallic mineral and their products supplying a further $343. million worth of imports. These were followe by imports of fibres, textiles, and products t the value of $239.7 million and agricultura vegetable products at $232.8 million. Fruits sugar and its products, and beverages accounted for the bulk of this import of agricultura products.

---

(1) As of June 1. (2) Exclusive of stillbirths. (3) Not applicable to figures on population. (4) Yukon and North-West Territories not included in figures for births, marriages and deaths.

(5) Newfoundland data are included as of June 1, 1949.

Note.—Until the end of 1947, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1948 are preliminary but tabulated in the same way. Monthly figures for 1947, 1948 and 1949 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

Note: Newfoundland data are included as of April, 1949. In the first five columns "unemployment assistance" for that Province is disregarded.

(1) Monthly data as of end of month while annual section is based on averages of month-end statistics.

(2) As of July 1949, due to changes in method of recording payments, the number of benefit payments (equivalent to the number of beneficiaries) in the week which includes the third Friday of the month, has been substituted for the number of persons receiving benefit in the month.

(3) Prior to 1944 data included deferred as well as current vacancies.

---

(1) Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

(1) As of April 1949, imports of Newfoundland are consolidated.

(2) Annual computation to 1946 entails considerable adjustments in production and external trade as described on page 23 of the Coal Report for 1946.

Note: As of April 1949, Newfoundland is included.

(1)Total pulp production was revised where necessary to cover "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

(2)Totals include unspecified pulp.

---

(1) Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

(2) Excluding producers' interchange.

(3) Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

(4) Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December 1946.

---

(1) The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1) Figures cover the production of firms which normally account for 85 per cent of the total for Canada.

(2) Since January, 1949, includes concrete chimney blocks. (3) Prior to 1947 data on producers' sales were used to indicate production. Annual and monthly production for 1947, 1948 and 1949 are obtained by adjusting producers' sales for changes in inventories.

---

(1) Hollow blocks including fireproofing and load-bearing tile. (2) Planks and boards.

(3) Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

(1) Includes imports to the end of 1947-48 while in 1948-49 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

(2) Figures of customs exports from 1945-46 to 1947-48 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1948-49 are customs exports and will be adjusted when required information is available. (3) Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption. (4) Includes customs exports of Canadian oatmeal and rolled oats.

---

(1) Available for January, April and August only. 1948 and 1949 indexes are subject to revision.
(2) Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.
(3) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.
(4) Prior to 1941 prices were quoted on a live weight basis.
(5) Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

(1) Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transactions,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

(2) Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board. *See footnote of page 96.

Merchandise Exports by Commodities(1)

Note: As of April 1949, the Trade of Canada includes that of Newfoundland.

[1] Before 1935 totals are overvalued due to the inclusion of U.K. excise taxes on imports of spirits from that country.

---

(1)The annual statistics embrace all steam railways, while monthly data refer to railways with annual operati revenues of $500,000 or over. (2)Operating income equals operating revenues less operating expens adjusted for tax accruals and rent of equipment and joint facilities. (3)For the Canadian National a the Canadian Pacific, retroactive wage increases, totalling $29,085,087, paid in September 1948, were n included in that month's operating expenses. Payrolls as now reported monthly are according to t new wage scale.

Grand Total Disbursements	2,336.1	188.0	256.2	178.7	165.2	151.1	869.4	765.5

Beginning in July 1949, certain advances that were formerly classified under "Miscellaneous Loans and Advances" are now included in the new category "Working Capital Advances to Crown Corporations". This account does not appear on the monthly statements. Revised figures on the new basis are not yet available for April, May and June 1949. The data for the corresponding month of the previous fiscal year are comparable to those for the current year.

(1) Does not include advances to Foreign Exchange Control Board which are equivalent in substance to cash balances either in Canada or abroad, nor temporary investment of surplus cash in the Government's own securities. (2) Includes assumption of Newfoundland guaranteed stock of $71,709,459.

Note: Credit items are due to repayments and transfers between departments and classes of expenditure.

Farmers' Income
from
Farming Operations

In the field of agricultural statistics the Dominion Bureau of Statistics produces two very interesting and valuable estimates of farmers' income from farming operations. These are (*a*) Cash Income from the Sale of Farm Products and (*b*) Net Income of Farm Operators from Farming Operations. The first of these is published on a quarterly basis and the second on an annual one.

In any consideration of these estimates it is of vital importance that full regard be paid to the qualifying notation that it is only income from farming operations that is being discussed. These estimates do not include any income farm operators may derive from investments, mortgages, rents, etc., or from labour at non-farm occupations such as logging in the winter time, provincial roadwork or (as is frequently the case of farmers on the prairies who have no live stock and spend the winters in urban communities) industrial employment.

Thus neither of the estimates to be discussed below pretends to present a picture of the entire income of the farming community in Canada and neither of them should be used as illustrations of the percentage of the gross national income which is enjoyed by the Canadian farmers. They are, however, invaluable guides to the year by year fluctuations in the prosperity of agricultural industry in Canada.

"Cash Income from the Sale of Farm Products" estimates on a quarterly basis the actual cash received by the farmers from the sale of their products during the quarter. It is usually published within eight weeks of the close of the quarter and thus provides a very up-to-date estimate of the gross amount of cash flowing into the hands of the farmers. Due to very great seasonal fluctuations in the quantities of farm products delivered to market there is little, if any, comparability, quarter to quarter, and therefore the Bureau report presents, in the interests of comparison, receipts for the similar quarters of the two previous years.

In order to present the estimate without undue delay it is necessary to determine prices received by farmers through a sampling technique not unlike that described in the October issue of the *Canadian Statistical Review.* Monthly questionnaires are mailed to a corps of about 4,000 voluntary farm price reporters, and a return of about 50 per cent is received. It is interesting to note that many of these price reporters have been thus co-operating with the Bureau of Statistics for about 20 years. In order to keep the monthly questionnaire as short and as simple as possible prices are asked only for 36 different farm products. Those remaining, which are of minor importance only, are priced by the Bureau's Agricultural Division through terminal market prices, with a deduction for handling and hauling charges.

Determination of quantities

The average of the prices determined through the methods described above are then applied to the known quantities of each product delivered by the farmers and the gross income from the sale of each product thus determined. Quantities are ascertained in several ways. For example: The statistical branch of the Board of Grain Commissioners provides very detailed information on farmers' marketings of the five principal grains (wheat, barley, rye, oats and flax) in each of the Prairie Provinces. It is obvious that with average prices received by farmers having been determined by sampling, and delivered quantities of these grains accurately known, there is no difficulty in determining the total amount of money paid to the farmers for these products.

The Marketing Service of the Department of Agriculture is another fruitful source of farm sales data, especially for numbers of live stock entering commercial channels. When its figures are combined with those obtained by the Bureau, through its own semi-annual count of live stock on farms, a fairly complete count of the total live stock sold by farmers is obtained.

The Bureau obtains a good deal of the basic information for the farm income statistics from surveys conducted in various fields of agriculture. For instance fairly complete data are now available through monthly surveys of the quantity of milk and eggs produced and sold by farmers. Information pertaining to wool, maple products, honey, fruits and seeds is obtained in a similar manner.

For such a crop as sugar beets, information is obtained directly from the beet sugar manufacturers who are the sole purchasers and processors of the crop. Statistics for tobacco which is sold only to manufacturers or exporters are secured in the same way.

Other minor crops or products present greater difficulties but since data obtained in the censuses, which are taken every five year in the Prairie Provinces and every ten years elsewhere, are complete, these can be projected according to observable trends into the current quarter. Since such minor products account for only a small proportion of farm income from the sale of farm products any error in the manner of computation, while unfortunate, is not of sufficient consequence to affect seriously the estimate as a whole.

Net income figures

While cash income from the sale of farm products provides a criterion by which, in a general way, farmers' financial position may be measured, it does not take into consideration farmers' expenditures and for this reason, if not complemented by a statement of net income, might easily be misleading. Cash income does not truly indicate the amount of money available to meet farm family living expenses, income tax payments, recreational or saving funds or the amount of money available for investment in the farm itself either through additions to it, new buildings or new equipment, or for investment in other fields. For this information we must turn to the annual estimate of "Net Income of Farm Operators from Farming Operations". This is calculated by taking the cash income already discussed and adding to it income in kind, and the value, positive or negative, of changes in the year-end inventory of farm-held live stock and grain, and subtracting from the total thus reached operating expenses and depreciation.

Income in kind includes all produce grown or raised on the farms and consumed in farm homes, plus an imputed value for house rent. Several methods are used in computing the cash value of income in kind. For most items the annual estimate of the value of home-consumed farm products is derived from the census reports on quantities of products so used, adjusted for value according to the prevailing average prices for the year under consideration. However some of the commodity sections of the Bureau's Agricultural Division provide complete annual estimates on both quantities and values of particular farm products which are consumed on the farms. For example the poultry and dairy sections annually estimate the quantities of poultry, eggs and dairy products which are farm-consumed, and also estimate the costs of these products at the prices paid to farmers.

Where other sources fail to supply the required data, it is assumed that the proportion of total production which is consumed on farms in any one year is the same as was the percentage of home consumption to total output in the year of the last census, that is 1946 for Manitoba, Saskatchewan and Alberta, and 1941 for the rest of the country.

In arriving at a rental value of farm dwellings it is impossible to determine the rent which they would bring if rented rather than used by the owner-operator. Farm rent either on a cash or crop-share basis is quoted for land and buildings together and it is not possible to break down such rent payments between house rent and rent for land and other buildings. Therefore an attempt has been made to estimate rent on the basis of actual cost of maintaining the farm dwellings with allowances for repairs, depreciation and the interest on money invested, plus taxes on farm dwellings.

Estimated changes in the number of liv stock and the quantities of grains on farm at the end of the year are readily obtainabl from surveys conducted by the live stock an crop sections of the Agricultural Division, an to these quantities are applied farm price which prevail at the close of the year. Thu it is possible to calculate the change in inven tory value which must be added to or subtracted from the other totals that go to make up the net income figure.

Farm operating expenses

As in the case of farm cash income estimates, much reliance is placed on other government departments, both federal and provincial, in determining operating expenses. The Bank of Canada provides information relative to the amount of taxes levied on farm property. The Feeds Administrator provides statistics on the quantity of feed grains shipped from western to eastern Canada under the Federal Freight Assistance scheme. Figures on grain sold to farmers by country elevators in the Prairie Provinces are obtained from the Board of Grain Commissioners.

Several provincial departments of highways or similar offices supply on request records of quantities of tax-exempt gasoline, used largely by farmers, sold each year. Truck licence fees can be obtained from the same sources. The provinces of British Columbia and Alberta provide information on the water costs in the several irrigation areas in those provinces.

The Bureau's annual Census of Industry, which was discussed in the June issue of this magazine, provides statistics on the production and plant value of many items used almost exclusively by agriculture. Many of these items, such as prepared stock and poultry feeds, fertilizers, insecticides, fencing materials, when adjusted in value to allow for transportation and retail mark-up are used in computing farm operating expenses.

The total farm wages bill (with and without board) is determined from the Bureau's own December survey. In this the Bureau by means of a questionnaire seeks information on several facets of the agricultural industry including data on the number of persons hired during the year, the rate of wages paid and the gross amount paid in wages during the year.

Utilization of data

From these two sources, the quarterly cash income and the annual net income, we can and do obtain a very fair picture of the economic position of the Canadian farmer. It is not complete because, as has been mentioned, it does not contain any estimate of non-farm income. It does however show the gross amount of money received by farmers from farm operations, and at least the minimum sum available to the agricultural community after farm operations have been paid for.

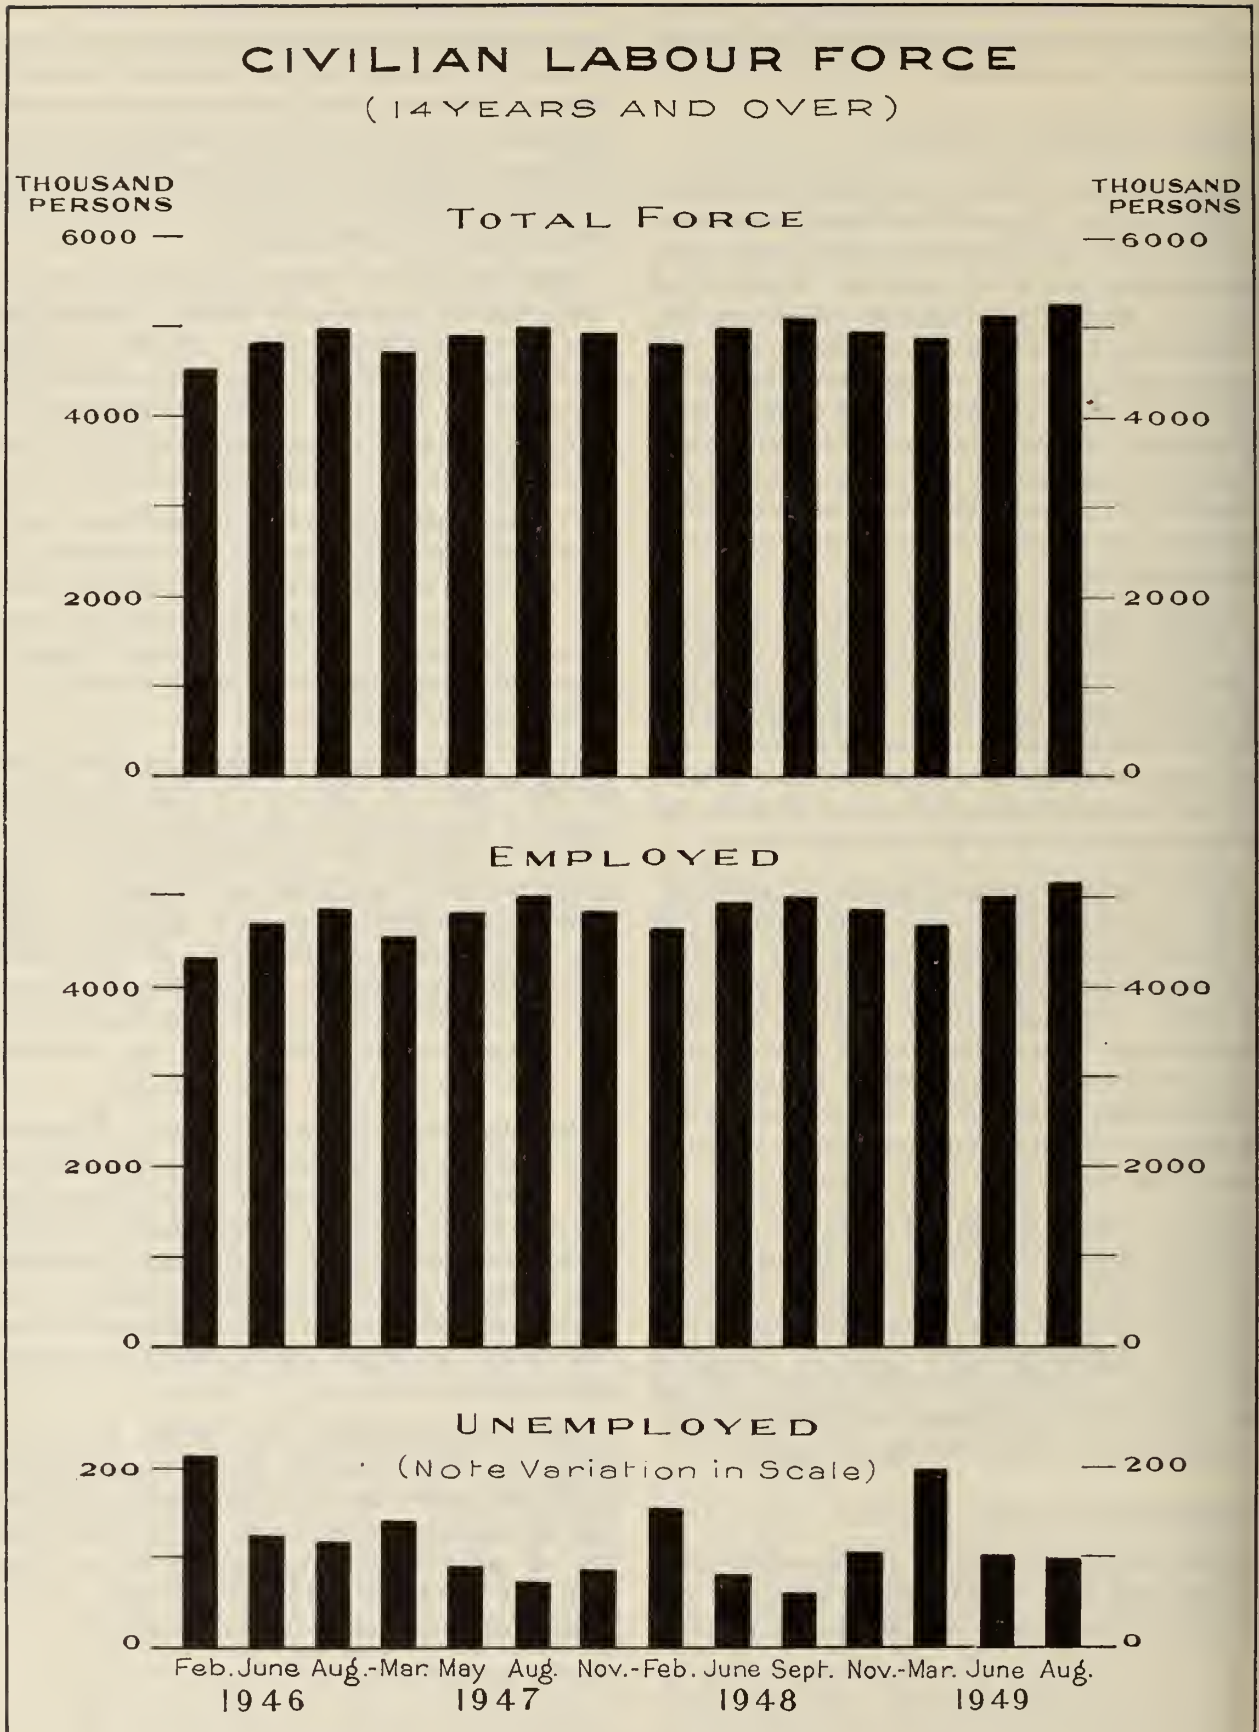
Such data are of vital importance to almost every section of the community. Within the Bureau of Statistics itself several divisions other than that compiling the material find good use for it. The Federal Department of Agriculture in its various services relies extensively on the data presented in both reports.

Provincial departments of agriculture, which co-operate in every way in the collection of the statistics on which these reports are based, rely on them to a very great extent in their operations, as do other provincial departments interested in the economic condition of their respective provinces.

Those manufacturers producing goods primarily used by farmers are also consistent users of the material and indeed would like to see it augmented and particularized. One group of such manufacturers recently asked that consideration be given to breaking down the data now available only by provincial totals into county or crop district totals. Unfortunately such action is not, due in part to the cost and in part to the time element involved, practicable at this moment.

Distributors, both on the retail and wholesale level can utilize these figures, particularly the quarterly estimates of cash income, in order to estimate the probable buying potential within each province's rural areas. In many cases their inventory holdings could be enlarged or decreased as the estimate rises or falls below the figure for the same quarter of the previous year.

Farm organizations also must rely very largely on these data in their preparation of briefs for presentation to both the federal and the provincial governments. The data again are of use to such organizations in their constant study of farm operations, and in their efforts to increase farm efficiency.



CIVILIAN LABOUR FORCE
(14 YEARS AND OVER)

Current Economic Conditions

A review of the major factors which tend to influence Canadian economic developments indicates mixed trends in comparison with the two previous years.

The index of industrial production stood at 187.1 as compared with 184.1 for September, 1948 and 174.9 for September, 1947. The index for non-durable manufactures production was 185.3, an all time high as compared with 181.1 and 173.0 for September of the two earlier years, while that for durable manufacturers was 216.7 in September of this year, down from the 219.5 figure reached in September, 1948, but above the 210.1 figure for September, 1947. These seasonally-adjusted indexes are on a base 1935-39 = 100.

Railway revenue freight loadings for the month of September were estimated at 9,968,000 tons, 7.6 per cent below the 10,787,000 tons loaded in September, 1948, and 0.2 per cent below the September, 1947 figure of 9,983,000 tons. The number of freight cars loaded with revenue freight in the month of September of each of the three years under review was 363,000 cars (1949); 378,000 (1948) and 352,000 (1947).

The general wholesale price index last September was 155.4 compared with 158.4 in September a year ago and 134.0 two years earlier. This index has now declined steadily but slowly since a high of 159.6 was reached in December of 1948. The wholesale price index of Canadian farm products was 145.7 as compared with 149.7 and 133.5 in the two preceding years. The fluctuations of this index have recently been irregular since it dropped to 145.1 in February of this year and then reached 150.9 in July before again turning downwards.

Despite these drops in wholesale indexes the cost-of-living index has shown year to year increases since it stood at 139.4 in September, 1947, moved to 158.9 in September, 1948 and to 162.3 in September of this year. The October figure for this index is practically unchanged at 162.2

The index of common stock prices stood in the month under review at 109.6 somewhat lower than the 113.4 of a year ago but higher than the 104.1 of September, 1947. This index for October, 1949, reached 114.3 which figure represents a considerable gain from the low of recent years which was 99.6 reached in June last.

Unemployment advances

Throughout the current year the number of unemployed persons, the number of days of consecutive unemployment, and the dollar total of benefits paid under the Unemployment Insurance Act have all been higher each month than in the same month of the previous two years.

The number of claims filed in the local offices during September last was 59,080 compared with 33,036 for the same month of the year 1948. For the same months the number of live unemployment insurance claims on the last working day of the month were 83,525 and 44,861. The amount of benefit paid in September, 1949, was $3,671,773 while $1,694,139 was paid in September, 1948, and $1,512,096 in the same month of 1947. (A small increase in the amount paid to beneficiaries with dependents came into effect in October, 1948.) The number of days of proven unemployment in respect of which benefits were paid was 1,611,461 in September last, 871,967 in September, 1948, and 798,873 in September, 1947.

In February, 1949, at the peak of last winter's seasonal unemployment, the number of claims filed during the month totalled 108,759 and there were 208,818 live unemployment insurance claims on the last working day of the month. $8,158,903 in benefit was paid in respect of 3,734,487 days of proven unemployment.

Despite the above, a survey of the civilian labour force taken in the week ended August, 20, 1949 indicates that there were more job holders in Canada at that time than ever before. A partial explanation of this apparent paradox lies, of course, in the fact that the number of persons in the labour force is increasing more rapidly than the number of persons with jobs. In addition some of those holding jobs, according to labour force definitions, may be able to claim benefit under the Unemployment Insurance Act.

The survey showed a labour force estimated at 5,253,000 persons, an increase of approximately 144,000 over the total for the week ended September 4, 1948. The number with a job (whether they worked at it or not) reached 5,155,000, an increase of only 113,000. Of the job holders the survey indicated that 121,000 worked 24 hours or less during the survey week and some of them were therefore under certain circumstances eligible to claim unemployment insurance benefits. The number idle but seeking employment was estimated at 98,000 not all of whom would, of course, for various reasons be eligible to receive benefits under the Unemployment Insurance Act.

Those not at work but seeking work thus represented about 1.9 per cent of the total estimated civilian labour force. In this connection it might be mentioned that the United States unemployed have been currently running at about 6 per cent of that country's civilian labour force.

Agricultural production

November estimates of the current wheat crop total 367.4 million bushels, some 26 million bushels below the 1948 estimate, while coarse grain estimates for 1949 are down markedly from 1948. Oats is estimated at 316.6 million bushels, barley at 120.4 million bushels, mixed grains at 55.7 million bushels representing declines of 42.2, 34.6 and 6.2 million bushels. The estimated wheat declines can be attributed to smaller crops in Saskatchewan and Manitoba more than offsetting gains in the rest of Canada. The smaller crop is reflected in the quantity available for export and carry over. The 323.3 million bushels available in the current year are 6.4 million bushels lower than last year's figure.

Exports in August and September have totalled 40.4 million bushels of which 19.5 million have gone out under the International World Wheat Agreement, while the United States has exported 11.8 million bushels and Australia 6.9 million bushels. This is the first year that this agreement has been in effect.

The October estimates for this years apple crop are higher at 17,339,000 bushels, 29 p.c. above 1948. The increase was general in all producing provinces with Nova Scotia, Quebec and Ontario leading. Peach and pear crop estimates also have increased with the pears now totalling 996,000 bushels, an increase of 26 p.c. above last year's figure, and peaches increased 16 p.c. to 2,034,000 bushels.

After a downward trend since June, milk production in August increased because of better pasture conditions. Of the milk produced during August 1,117 million pounds or 64 p.c. was utilized in factory produce, a decrease of 52 million pounds from a year ago. This decrease however was offset by an increase in the sale of fluid milk and cream (the latter expressed as milk), of 13 million pounds, bringing the total to 324,834,000 pounds. The actual cash income from the sale of dairy products was down $6,550,000 from last year to $36,263,000. One of the chief causes of this was the drop in milk price, which during August was $2.51 per hundred pounds, as compared to $2.83 a year ago.

Dairy butter production was also lower in August this year, bringing the January-August total to 37,515,000 pounds, 9 p.c. below last year's figure. Creamery butter production totalled 39,312,000 pounds, a decrease of 6.8 p.c. from last year. Butter stocks at September 1 were 67.4 million pounds, up 15 million from a year ago. Domestic consumption at 28 million pounds was 8 million below last year. This difference could, in part at least, be attributed to the introduction of margarine production.

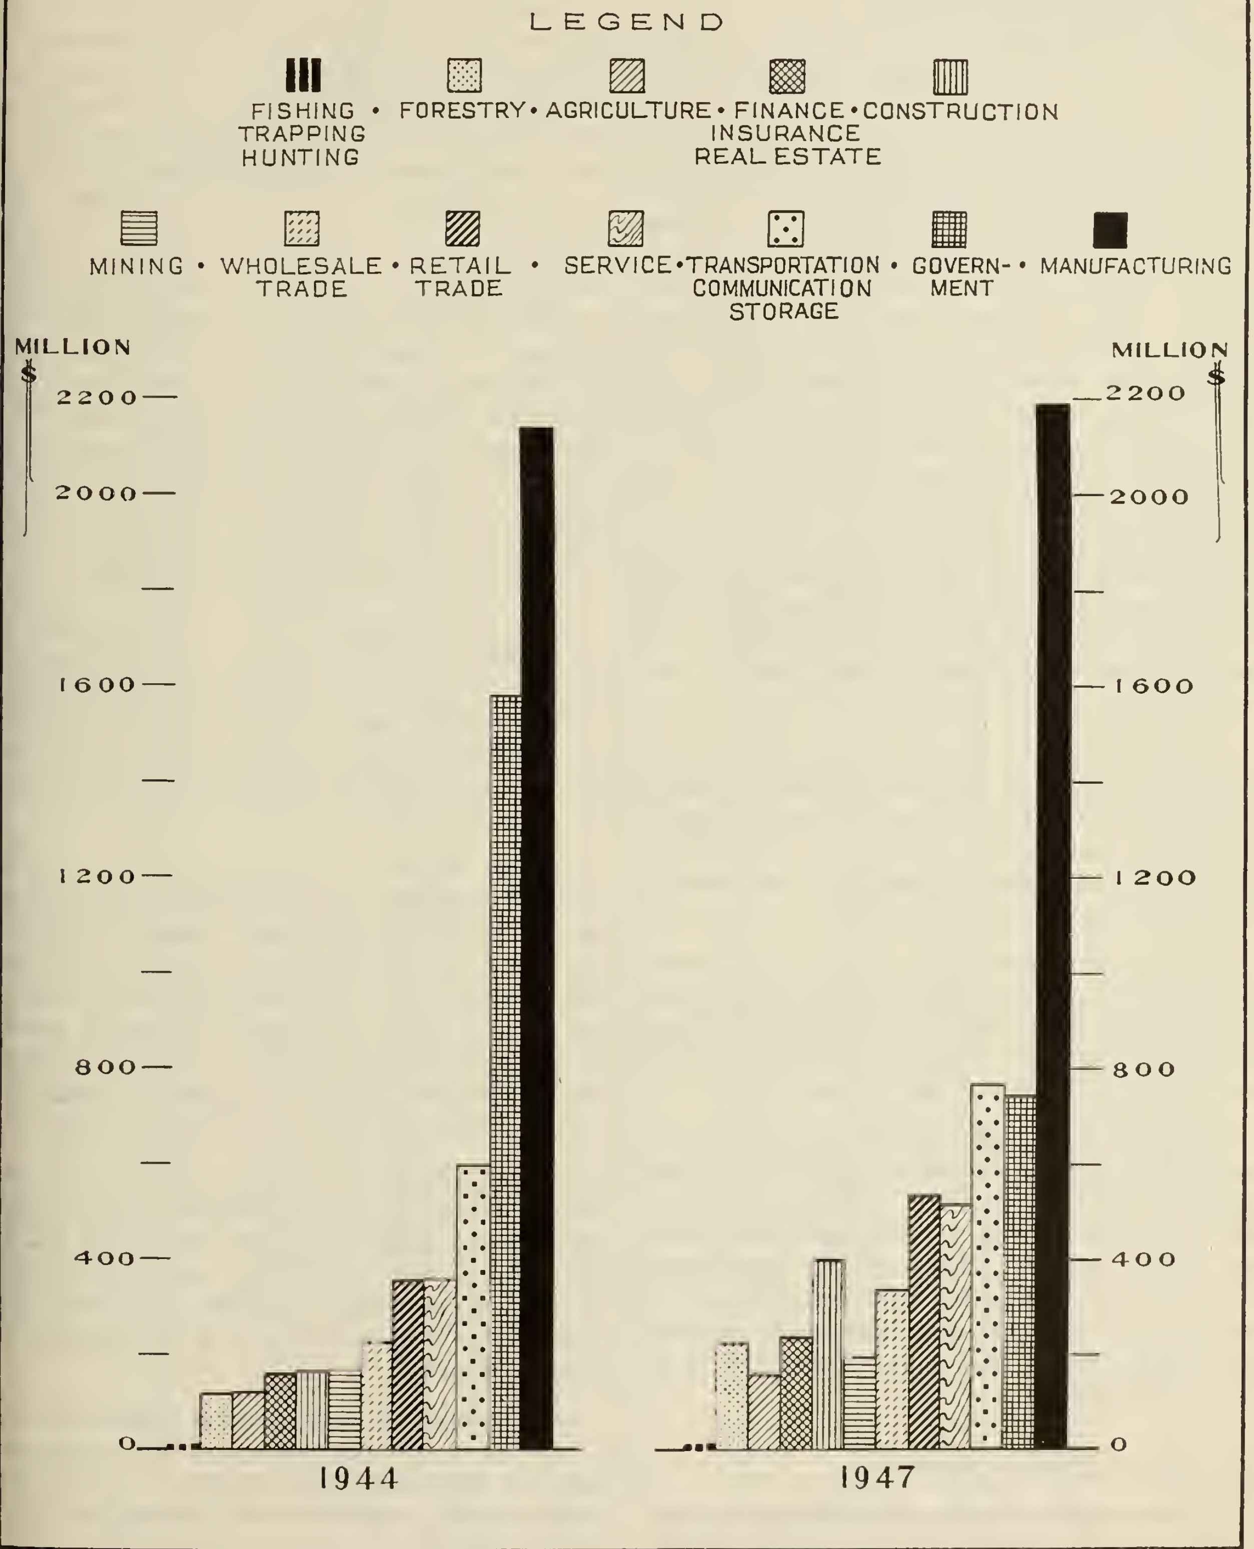
The prices received for all agricultural products continued down for the third consecutive month. The index of farm prices at 249.3 (1935-39 = 100) is 12.2 points lower than a year ago. This decrease was due to lower prices for grains, live stock, and dairy products more than offsetting higher prices for potatoes, poultry and eggs. The decrease in grain prices is due in part to the Canadian Wheat Board's taking over the marketing of coarse grains and making only an initial payment which may be supplemented at a later date.

Retail trade advances

The value of Canada's retail trade transactions in September was estimated at $685 million, an increase of $46 million or 7.2 per cent over the total of $639 million reached in September, 1948. Sales were also 6.4 per cent higher than the total of $644 million for August of this year.

SALARIES, WAGES AND SUPPLEMENTARY LABOUR INCOME

BY INDUSTRIES



Total dollar sales for the first nine months of the current year amounted to an estimated $5,543 million, an increase of 7.1 per cent over the $5,175 million recorded during the same period of the year 1948. A rather uniform rate of increase over the totals for the previous year has been noted in each of the past several months with gains ranging from 5 to 8 per cent being recorded in the period May to September.

Nearly every kind of retail store reported moderate sales gains in September of this year over the same month of last year, with similar increases for the nine month period. Among the few increases which exceeded the average gain of 7.2 per cent were those of motor vehicle dealers with a 28 per cent jump comparing September, 1949 with that of 1948, and furniture stores with a gain of 10 per cent. The motor vehicle trade has maintained a consistently high rate of increase throughout 1949 and had a cumulative gain of 20 per cent in the nine months' comparison. Further evidence of increased activity in the automotive field is reflected in the sales increases for filling stations and garages which amounted to 12 per cent comparing September, 1949 with the same month of the earlier year, and 11 per cent in nine-month cumulative totals.

A very noticeable change in trend occurred in the case of coal and wood dealers whose sales increased 12 per cent in the monthly September comparison, but still showed a 6.5 per cent shrinkage when the nine-month totals of each year are compared.

Declines from September of last year were noted only in country general stores which had a 3 per cent drop, and in the allied lines of men's, family and women's clothing which had declines of 1.5, 3.2 and 7.6 per cent.

Provincial sales increases in September were remarkably consistent with those for the first nine months of the year. Increases for the Prairie Provinces were higher than were those for other provinces, both in the September and in the nine month's comparison, but the margin of difference in rate of increase between the Prairie and the other provinces was narrowed slightly.

American developments

The recent strike in the steel industry is now ended and the workers in the coal industry have, in the main, returned to the pits. The severity with which the two strikes hit the United States industrial scene can be judged by the rapid decline in the Federal Reserve Board's index of industrial production. The October figure was 152 as compared with September's 172 and an all time high of 195 reached in November, 1948. The declines of 11.6 per cent from the previous month and 20.5 per cent from the high can be attributed, in large part, to the partial paralysis induced in nearly all phases of industry due to the lack of the essential elements of steel and coal.

The Director of the United States budget estimates that his country's budgetary deficit for the fiscal year ending June 30, 1950, will amount to approximately $5.5 billion, the highest peace time deficit ever recorded. The deficit for the fiscal year ended June 30, 1949, amounted to $1.8 billion. In the current fiscal year it is estimated that receipts will total $38 billion and expenditures $43.5 billion. $12.3 billion or 28.5 per cent of all expenditures are to be spent on various defense projects.

Consumer credit rose to a record high of $16.8 billion in September last, as compared with $16.5 billion in August and $14.5 billion in September of last year. A rise of $122 million in automobile sales credit was the greatest single factor in the September increase over the previous month.

United States metal prices have turned somewhat higher in recent weeks. Steel scrap which on October 29 was quoted at $25.58 a ton advanced to $28.92 on November 15; copper moved from 17½ to 18½ cents per pound during the same period; zinc from 9½ cents a pound to 10 cents; while lead declined slightly from 13 cents a pound to 12¾. Canada is a large exporter of the three last mentioned metals.

Signs of renewed retail purchasing in the United States are to be found in the fact that department store sales for the week ended November 5 were only 2 per cent below those of the comparative week of the previous year. This is the best week-to-week comparison in several months.

The Bureau of Agricultural Economics in a forecast of 1950 business conditions indicates that "A further slight reduction in economic activity and a relatively slow decline in prices appear likely".

(1) Personal income is given on an annual basis for months as well as for years.

(2) Includes army civilian supply exports from February 1947.

(3) Annual totals are averages of end of month figures.

(4) Standard and Poor's Corporation. The series currently used represents 416 stocks.

(5) Series revised to incorporate changes in classification and adjustment to bench mark levels. Revised data prior to August 1948 will be shown later.

(1) As of June 1. (2) Exclusive of stillbirths. (3) Not applicable to figures on population. (4) Yukon and North-West Territories not included in figures for births, marriages and deaths.

(5) Newfoundland data are included as of June 1, 1949.

Note.—Until the end of 1947, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1948 are preliminary but tabulated in the same way. Monthly figures for 1947, 1948 and 1949 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

Note: Newfoundland data are included as of April, 1949. In the first five columns "unemployment assistance" for that Province is disregarded.

(1) Monthly data as of end of month while annual section is based on averages of month-end statistics.

(2) As of July 1949, due to changes in method of recording payments, the number of benefit payments (equivalent to the number of beneficiaries) in the week which includes the third Friday of the month, has been substituted for the number of persons receiving benefit in the month.

(3) Prior to 1944 data included deferred as well as current vacancies.

---

(1) Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

(1) As of April 1949, imports of Newfoundland are consolidated.

(2) Annual computation to 1946 entails considerable adjustments in production and external trade as described on page 23 of the Coal Report for 1946.

Note: As of April 1949, Newfoundland is included.

(1)Total pulp production was revised where necessary to cover "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

(2)Totals include unspecified pulp.

---

(1) Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

(2) Excluding producers' interchange.

(3) Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

(4) Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

(1)The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1) Figures cover the production of firms which normally account for 85 per cent of the total for Canada.

(2) Since January, 1949, includes concrete chimney blocks. (3) Prior to 1947 data on producers' sales were use to indicate production. Annual and monthly production for 1947, 1948 and 1949 are obtained by adjustin producers' sales for changes in inventories. (4) Includes Newfoundland as of May 1949.

---

(1) Includes Newfoundland as of May 1949.

(2) Hollow blocks including fireproofing and load-bearing tile.

(3) Planks and boards.

(4) Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

(1) Includes imports to the end of 1948-49 while in 1949-50 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

(2) Figures of customs exports from 1945-46 to 1947-48 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1948-49 are customs exports and will be adjusted when required information is available. (3) Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption. (4) Includes customs exports of Canadian oatmeal and rolled oats.

(1) Available for January, April and August only. 1948 and 1949 indexes are subject to revision.

(2) Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.

(3) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

(4) Prior to 1941 prices were quoted on a live weight basis.

(5) Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

[(1)] Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transaction,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

[(2)] Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board.

[(3)] Does not include proceeds of 100 million dollar loan floated by the Government of Canada in the United States in August.

*See footnote of page 96.

---

(1) Does not include re-exports.

(2) This column has been revised to exclude ferro-alloys and iron ore. Exports of primary iron and steel now comprise pigs, ingots, blooms and billets, and rolling mill products.

(3) Other iron and steel has been revised to include iron ore.

Merchandise Exports by Commodities[1]

(1) The annual statistics embrace all steam railways, while monthly data refer to railways with annual operati revenues of $500,000 or over. (2) Operating income equals operating revenues less operating expens adjusted for tax accruals and rent of equipment and joint facilities. (3) For the Canadian National a the Canadian Pacific, retroactive wage increases, totalling $29,085,087, paid in September 1948, were n included in that month's operating expenses. Payrolls as now reported monthly are according to t new wage scale.

Beginning in July 1949, certain advances that were formerly classified under "Miscellaneous Loans and Advances" are now included in the new category "Working Capital Advances to Crown Corporations". This account does not appear on the monthly statements. Revised figures on the new basis are not yet available for April, May and June 1949. The data for the corresponding month of the previous fiscal year are comparable to those for the current year.

Does not include advances to Foreign Exchange Control Board which are equivalent in substance to cash balances either in Canada or abroad, nor temporary investment of surplus cash in the Government's own securities. (2)Includes assumption of Newfoundland guaranteed stock of $71,709,459.

Note: Credit items are due to repayments and transfers between departments and classes of expenditure.

Animal Products Statistics

The work of the Animal Products Section of the Industry and Merchandising Division of the Bureau of Statistics forms part of the annual Census of Industry. It is concerned with the collection and compilation of statistical data on the manufacturing or processing of commodities of animal origin, whereas the Agriculture Division of the Bureau is more concerned with data covering the animals themselves and the primary products derived from them. It is impossible, of course, to draw a hard and fast line between the two fields consequently dairy factory statistics include data on a considerable quantity of fluid milk sold and those of the slaughtering and meat packing industry include data on fresh meat, a product that may be described as "processed" but certainly not as "manufactured". The statistics collected and compiled by the Animal Products Section fall into three main groups: those dealing with dairy factories, those dealing with meat products and those dealing with leather and fur products.

"Dairy factories" as defined for purposes of the Census of Industry includes creameries, cheese factories, combined butter and cheese factories, milk condenseries, specialized ice cream factories and processed cheese factories. The work of the section under review is confined to publishing annual data on the operations of the dairy factories. The monthly statistics are collected by the Agriculture Division of the Bureau as a matter of convenience and economy, as they can most easily be obtained at the same time as those dealing with fluid milk.

The data on which the section's reports are based are gathered by means of questionnaires sent to every factory engaged in manufacturing or processing dairy products. Information is obtained on every phase of operations including costs of raw material, power, fuel, labour, etc. It will be recalled that a full description of this procedure was given in an article on the Census of Industry to be found in the June issue of the *Canadian Statistical Review*.

As all nine provinces (Newfoundland has not yet been included in annual statistics) have departments of agriculture, a close cooperation is maintained with them and in six of the provinces the distribution and collection of the annual schedules or questionnaires is carried out by the provincial authorities who also give valuable aid in obtaining reports from those operators who are tardy in filing them. This cooperation also helps to avoid duplication of effort as between federal and provincial authorities.

Reports on dairy factories

Publications on the operations of dairy factories include three subsidiary reports, issued soon after the close of the year and one main report incorporating the data contained in the first three and also much additional information. These reports are: (a) *Ice Cream Production* showing quantity and value of production, main producing industries and per capita consumption; (b) *Processed Cheese Industry* showing quantities, types and value of production; and (c) *Production of Dairy Factories* showing quantity and value of butter, cheese and other products as well as the number of factories engaged in operations. *Statistics of Dairy Factories* issued, in bilingual form, several months after the close of the calendar year enlarges on the data given in the first three publications and gives information on the number of patrons (farmers supplying raw material) payment to patrons, numbers of employees, wages paid, exports and other data of similar import.

These reports are, of course, of vital importance to all engaged in the dairy industry, to the federal and provincial departments of agriculture and to many other organizations interested in the promotion of the farmers' welfare. They are helpful, also, to the merchants, both wholesalers and retailers who bring the products of this industry to the consumer.

Meat products

The industries in this group include slaughtering and meat packing, sausage and sausage casing manufacturing, and animal oils and fats production. The value of the output of the slaughtering and meat packing industry is very high, totalling $486,917,000 in 1947. The gross value of sales usually places this industry among the first three manufacturing industries ranked according to value of product.

The sausage and sausage casing industry may be considered as supplementary to the slaughtering and meat packing industry. Some 75 firms operate in this field, most of them on a very small scale. The industry had an output value of slightly over seven million dollars in 1947. More sausage is produced in meat packing itself than in the separate specialized industry while in the case of sausage casings only six per cent of the total output is produced by the smaller industry.

The animal oils and fats industry covers the activities of rendering plants, whose products include tallow, meat scraps, animal foods, and fertilizers. Production in 1947 was valued at slightly less than two million dollars.

The usual data covering operations in the first two industries, slaughtering and meat packing and sausage and sausage casings, are given in one annual report entitled *Slaughtering and Meat Packing Industry* while data on animal fats and oils are included in an annual report on miscellaneous manufacturing industries.

The current situation is covered in two monthly reports issued by the Agriculture Division of the Bureau. These are: (a) *Cold Storage Holdings of Meat and Lard* showing in detail quantities in storage at the first of each month and (b) *Output and Comsumption of Meat and Lard in Canada* giving estimates of meat production, dressed weights, imports and exports, total supply, consumption and other related data.

Leather and fur products

The gathering of statistics on the utilization of hides and skins by means of questionnaires is quite naturally also a function of the Animal Products Section. Two subdivisions are recognized (a) leather and its products and (b) fur products. Under the first of these are shown data on the tanning of hides into leather and on its subsequent manufacture into leather products.

The publications in which the collected monthly data are presented are: (1) *Statistics of Hides, Skins and Leather* showing stocks of raw hides and skins at the end of the month and wettings of hides and the production of finished leather during the month; and (2) *Production of Leather Footwear* giving total pairs produced, production by kinds for the month and year and comparative figures for the previous year. Table 29 of the *Canadian Statistical Review* to be found on pages 64-66 inclusive of this issue are based upon these monthly reports.

Annual publications dealing with leather products are: (1) *Leather Gloves and Mittens Industry;* (2) *Leather Footwear Industry;* (3) *Miscellaneaous Leather Goods, Leather Belting, Leather Boot and Shoe Findings;* and (4) *Leather Industry.* In all cases the usual data to be found in the Bureau's annual reports on industries is supplied.

The Canadian fur goods industry in which are engaged over 600 reporting firms recorded a production valued at $57,542,000 in the year 1947 with women's fur coats accounting for three-fourths of the dollar value. The operations of the industry are covered in one annual report entitled *Fur Goods and Fur Dressing Industries* which covers all phases of it.

In smaller industries such as those discussed immediately above the utilization of the reports, both monthly and annual is mainly to be found within the industries themselves. To a very great extent all operators within each industry are dependent for the statistics of it upon the data gathered by the Bureau. Indeed it might be said that in these and similar industries the prime function of the Bureau is, through its reports, to act as a clearing house of statistical information for the industry as a whole and to the individuals and firms engaged in it.

Fisheries Statistics

The fisheries industry is stratified, both vertically and horizontally, into a number of inter-related groups — fishermen, biologists, processors, packers, and shippers—but for statistical purposes the industry falls into two sections: primary and secondary.

The primary section is concerned with the catch of fish and with the fishing effort in terms of man-power, vessels employed, gear and other equipment. The quantity of fish landed is of great importance to processors and shippers in determining their operating and marketing plans. Its relation to fishing effort and to fishing districts is of importance to biologists and other technicians in studying conservation and exploitation of fish populations and the effects of using various methods of fishing and types of equipment in the pursuit of various kinds of fish in different sea, lake and river areas.

The secondary aspect of the fishing industry deals with the form in which the fish reaches the consumer. As food it may be fresh, dried, salted, smoked, frozen or treated in other ways. By-products, particularly meal, oil and fertilizer, also account for a significant part of the total production. Statistics collected on this section of the industry cover the operations of fish processing establishments, including such items as the number and remuneration of employees, costs of raw materials, supplies, power, fuel, containers, and the value of the finished products.

The combination of these primary and secondary data gives a picture of the industry —the fishing, the catch, the disposition of the catch in product forms—by districts, provinces and regions (East Coast, Inland, West Coast) and for Canada as a whole. To bring the picture a step nearer to completeness, external trade figures (fishery imports and exports) are included in the published statistics. It is thus possible to calculate with reasonable accuracy the Canadian domestic consumption of fish products.

Fisheries publications

It is important that those engaged in all phases of the fishing industry should have as much and as recent information as possible on the supplies of raw material and on the demand for the products of the fisheries. In collaboration with the federal Department of Fisheries and with the appropriate departments of the provincial governments, an attempt is made to meet this need by the issue of the *Monthly Review of Canadian Fisheries Statistics*, upon which is based table 43 of this review. This publication provides the latest available figures on the landings of fish and other marine creatures, by weight, value, species, and regions; on output of by-products; on the disposition of the catch in percentages of landed quantities; on stocks in cold storage; and on imports and exports as well as prices paid to fisherman.

At the present time the incorporation of Newfoundland statistics into this report is an important problem. In certain fields, such as external trade and cold storage holdings, this has been accomplished with little difficulty or delay. In others, however, such action must await the organization of a service of statistical reporting that will provide information comparable with that obtained from the other provinces. The efficient but limited statistical service of the Newfoundland Fisheries Board is being expanded for this purpose and it is hoped that current figures for the province may become available for inclusion in the *Monthly Review of Canadian Fisheries Statistics* during the first half of 1950.

The Advance Annual Reports on Fisheries give details of fish caught and marketed during the year, fishery by-products produced, capital equipment in use and data on employment for Canada as a whole and for each of the individual provinces, except Ontario and the Prairie Provinces which are dealt with as a group.

This is followed by the more comprehensive annual *Fisheries Statistics of Canada* which contains detailed production statistics, historical tables of annual landings, marketed values, data on employment in both sections of the industry, salmon and lobster packs, trawler landings, fishing bounty data and exports and imports.

The Livestock and Animal Products Section of the Agriculture Division of the Bureau of Statistics publishes *Cold Storage Holdings of Fish* on or about the fifteenth of each month showing in considerable detail the quantities and species of fish in storage at the beginning of the month.

1949

Current Economic Conditions

Most of the major factors which are generally used as criteria of Canada's current economic developments show little beyond seasonal fluctuations from the previous months but stand slightly higher than for the same months of earlier years.

The general index of industrial production (1935-39 average = 100) for October last stood at 185.5, down from the September figure of 188.5 but approximately equal to the October, 1948, mark of 185.4; in October, 1947, this index stood at 179.2. Canadian Labour Income was estimated at $662 million for the month of September last as compared with $658 million for the previous month and $663 million for September of 1948. The latter figure however contained an item of $31 million in retroactive pay to railroad employees. The September, 1947, labour income was $548 million.

The value of Canada's retail trade rose slightly more than two per cent in October over the corresponding month of the previous year amounting to $696 million as compared with $682 million. It appears probable that increased prices rather than increased volume of sales was responsible for the gain. The October sales were also slightly above those registered in September while the average monthly gain in the first ten months of this year over the same months of 1948 amounted to 6.5 per cent.

Coal production in Canada was nine percent higher in November than in the same month of the previous year. Imports, however were down 52 per cent in the month and 38 per cent when the 11-month cumulative total for the two years are compared.

Gross value of the principal field crops produced on Canadian farms is currently estimated at $1,427 million, down 16 per cent from last year's record value of $1,696 million and from the 1947 value of $1,531 million. Anticipated participation payments on western wheat, oats and barley, however, will place this year's crop value at a higher level than the current estimate.

Finance

Those business transactions represented by cheques cashed continued to advance in October when an increase of 8.8 per cent was recorded in the value of cheques cashed in clearing house centres over the same month of last year. The nation-wide dollar value amounted to $8,328 million, the largest total ever recorded in a single month; clearings for October, 1948 were $7,654 million.

Of the five accepted economic regions all except the Province of Quebec showed substantial gains over October of a year ago. In the Maritimes the inclusion of Newfoundland statistics resulted in a gain of 17.8 per cent although the clearing house at Halifax reported values practically unchanged while Moncton and St. John reported small recessions. Five of the Ontario clearing house centres reported small declines but substantial advances in Ottawa and Toronto resulted in a provincial advance of 13.1 per cent. The Prairie Provinces showed an October, 1949, advance over the same month of 1948 of 11.2 per cent when all centres except Medicine Hat recorded increases, Regina and Calgary having the greatest with 26.5 and 25.5 per cent respectively.

British Columbia showed signs of increased activity with an increase in clearings of 14.3 per cent. The city of Victoria had the greatest single increase with a jump of 42 per cent.

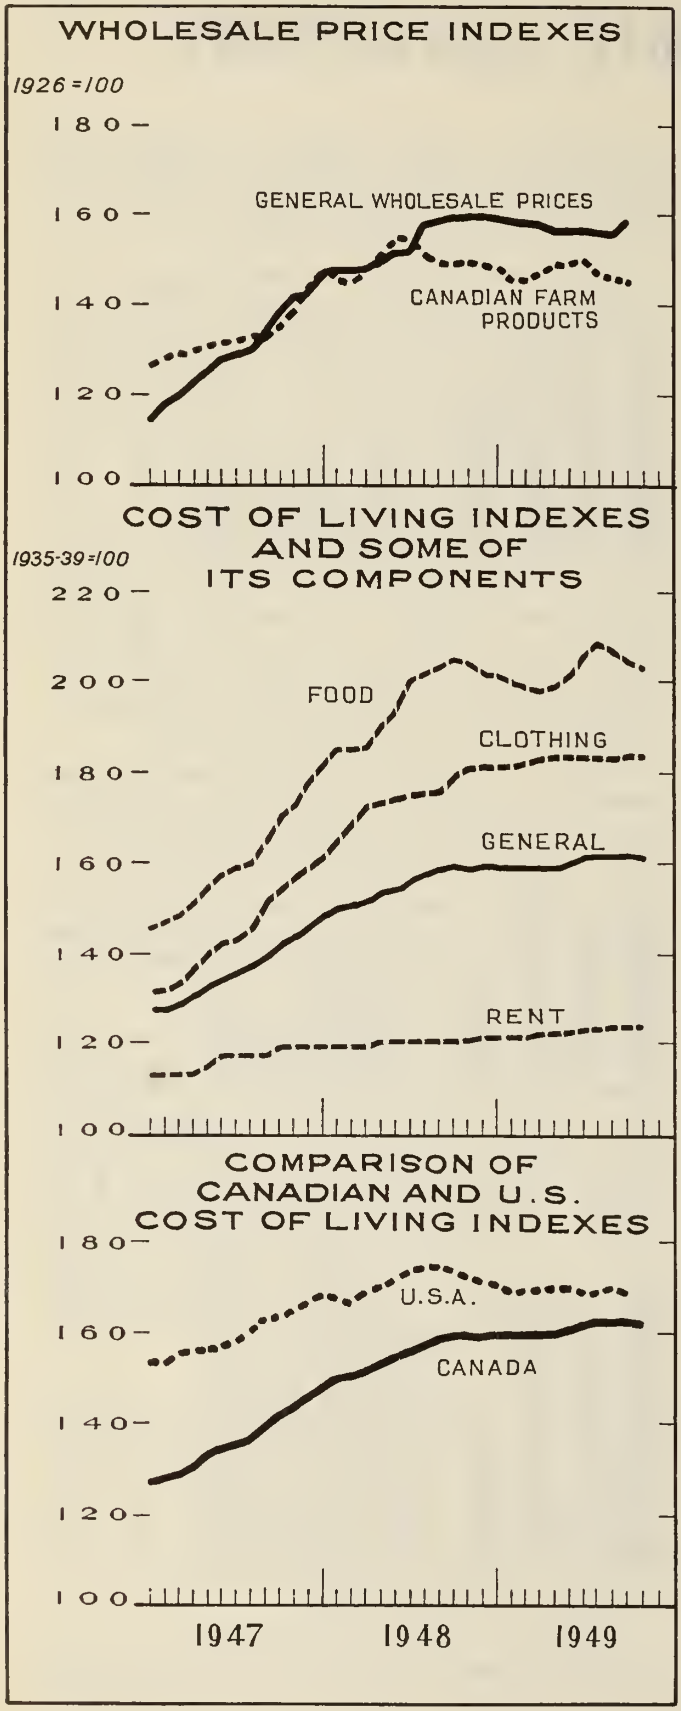
Shrinkage in the dollar value of clearings in Quebec city was sufficient to more than offset small advances in Montreal and Sherbrooke and the provincial total was off 0.9 per cent.

Security transactions between Canada and other countries showed the second greatest dollar value for any month of the current year in September with sales amounting to $21.6 million and purchases to $25.0 million, total transactions thus amounting to $46.6 million. The figure for the same month a year earlier was $39.9 million. Almost 90 per cent of all such transactions were with the United States to which country sales were made to the value of $21.1 million with purchases from it amounting to $20.3 million.

Despite the high tempo of economic activity commercial failures during the third quarter of the year exceeded those of the same period of a year ago, with 239 failures being reported. This is a greater number than were reported in any July to September period since the year 1940 and 32.0 per cent above the 181 failures of the same period of last year.

The estimated liabilities of concerns reported as bankrupt during the third quarter amounted to $15.2 million an increase of 34 per cent

PRICE TRENDS SINCE 1947



over the liabilities for the same period of 1948 and the highest amount recorded since the year 1934 when for the similar period liabilities of $17.8 million were reported by 1,159 bankrupt firms.

During the first nine months of the year 571 bankruptcies were recorded of firms located in the province of Quebec. It is apparent that in this province, in distinction to the others there is a tendency to enter upon commercial transactions in a comparatively small way and backed by a minimum of capital. Such firms are, of course, particularly vulnerable to any shifting of economic emphasis and thus must suffer a high mortality rate.

It should, perhaps, be pointed out that all bankruptcies of firms forced to default are not recorded in the Bureau's report since in some provinces, notably Ontario, firms in financial distress can frequently take advantage of a Bulk Sales Act and thus avoid bankruptcy proceedings.

Prices and merchandising

For the third consecutive month the cost-of-living index has shown a decline. Between October 1 and November 1 this index fell from 162.2 to 161.7, a drop of 0.5 points and now stands 1.1 points below the all time high recorded in August, 1949. The chief reason for the decline was easier food quotations with the subindex on this important item standing at 203.3 as compared with 205.0 on October 1. This decline was in part offset by upward movements in the subindexes dealing with fuel, consequent upon higher prices for American coal and coke, and furniture. The subindexes on rent and miscellaneous items remained unchanged.

Department store sales in October were valued at $82.9 million, only slightly above the September mark of $82.3 million. The January to October cumulative total was, this year approximately 7 per cent above that of the year 1948.

Review of provincial break-downs indicates that Alberta recorded the greatest increase in October over the same month of the previous year with an advance of 10.0 per cent. British Columbia with a gain of 6.7 per cent, Saskatchewan with one of 6.1 per cent and Manitoba with a 3.0 gain were the only other provinces to achieve advances. Decreases of 3.0 per cent and 2.2 per cent were recorded in Quebec and Ontario respectively while dollar value of sales in the Maritime Provinces was practically unchanged.

While the total amount of department store sales increased so too did the inventory value of stocks of goods which on October 1 stood at $20.7 million, up 11 per cent from the figure for the same month of the year 1948. The increase in inventory was caused by substantially higher holdings of furniture, clothing and footwear. The only substantial decrease, one year to another, occurred in food lines which shrank 36.9 per cent.

A new post war peak was reached in October when the sales of new motor vehicles numbered 29,577 units with a retail value of $59.8 million, an increase of 40 per cent in number and 43 per cent in value over the totals for the corresponding month of the previous year. The sales included 21,435 passenger cars, 8,121 trucks and 21 busses.

Construction

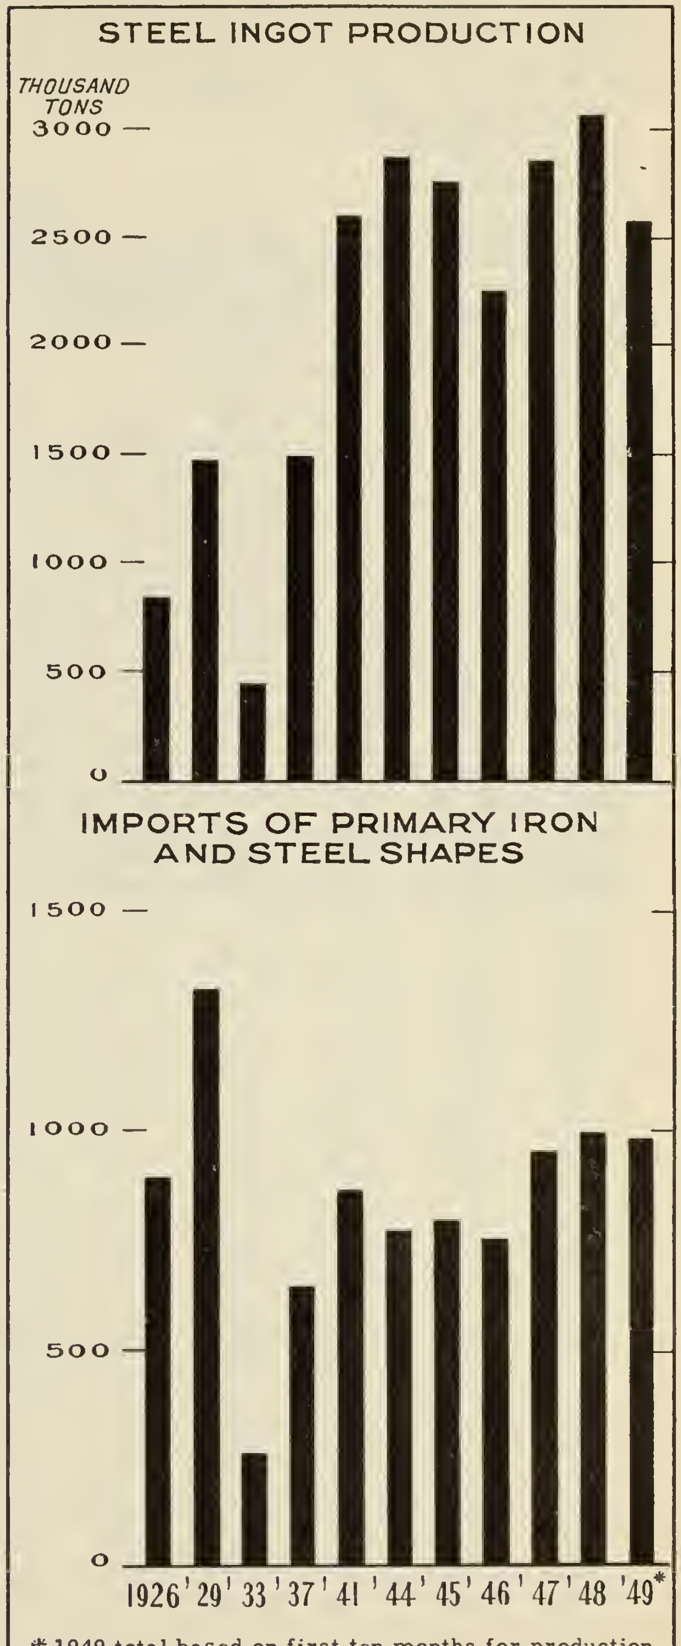
Due largely to the increases in the subindexes of paint and glass and electrical equipment and fixtures the composite price index of residential building materials rose to 227.0 (1935-39=100) after declining in each of the two previous months. It remains, however, below the mark of 228.9 reached in October, 1948. This slight rise in the index had, apparently little if any influence on employment since the index of employment in building stood in October at 265.1 as compared with 265.5 in September and 240.3 for October of the previous year.

The present trend in construction of dwelling units indicates that the emphasis has shifted from starts to completions. This is a normal seasonal development since with the coming of winter demands for completed housing are increasing and contractors therefore make every effort to complete as many units as possible leaving the beginning of new units until the spring.

During the month of September starts totalled 10,035 as compared with 10,651 for the same month of a year earlier and to 11,013 for the month of August. Dwelling units completed during the month totalled 7,563 up from the 6,667 for the same month a year ago but below the mark of 9,109 reached in August of this year.

In the nine-month period of January to September a beginning was made on the construction of 67,862 dwelling units, approximately five per cent fewer than were started in the same period of the year 1948. Completions, however, totalled 62,998 during the nine-month period as compared with 50,238 in the earlier year. The simultaneous decline in

CANADA'S STEEL POSITION



* 1949 total based on first ten months for production and first eight months for imports.

starts and gain in completions is due in large part to an unusually heavy carry over of partly constructed dwelling from the year 1948. On January 1, 1949, there were 56,456 dwelling units under construction whereas a year earlier there were only 42,215.

External trade

Canada's imports for consumption during the month of October were valued at $234.3 million and exports during the same month at $269.1 million. During the same month of the previous year imports were valued at $243.4 million and exports at $307 million.

The cumulative totals for the first ten months of this year were, imports $2,308.2 million, exports $2,415.1 million. During the same period of 1948 imports were valued at $2,166.7 million and exports at $2,465.1 million.

Transaction with the United States continue to dominate Canada's external trade position. During the first ten months of the current year total transactions with that country totalled $2,826.9 million with imports accounting for $1,638.2 million and exports $1,172.4 million. Thus 59.5 per cent of all transactions were with the United States which supplied us with 70.9 per cent of all our imports while buying 48.6 per cent of our total exports. Transactions with the United Kingdom were on a much smaller scale with imports from that country for the ten month period totalling $260.2 million and exports to her $598.3 million. Both imports from and exports to the United Kingdom were higher than in the same period of 1948 when Canadian purchases were valued at $246.5 million and sales $581.7 million.

During the ten month period under review total transactions with the United Kingdom accounted for 18.2 per cent of our whole external trade with imports from that country making up 11.3 per cent of all Canadian buying abroad and exports to it being 24.8 per cent of all Canadian exports.

Steel production

Production of steel ingots and steel castings amounted to 240,748 tons during the month of September last, 8,000 tons below the production of the previous month. Cumulative totals for the first nine months of the present and the past year amounted to 2,404,368 tons and 2,361,387 tons respectively.

Shipments of primary shapes by Canadian steel mills, exclusive of producers' interchange, totalled 223,339 net tons in September last, up about ten percent from the August total of 203,345 tons. The amount of producers' interchange was 75,959 tons in September as against 68,824 tons in August.

---

(1) Personal income is given on an annual basis for months as well as for years.

(2) Includes army civilian supply exports from February 1947.

(3) Annual totals are averages of end of month figures.

(4) Standard and Poor's Corporation. The series currently used represents 416 stocks.

(5) Series revised to incorporate changes in classification and adjustment to bench mark levels. Revised data prior to August 1948 will be shown later.

---

(1) As of June 1. (2) Exclusive of stillbirths. (3) Not applicable to figures on population. (4) Yukon and North-West Territories not included in figures for births, marriages and deaths.

(5) Newfoundland data are included as of June 1, 1949.

Note.—Until the end of 1947, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1948 are preliminary but tabulated in the same way. Monthly figures for 1947, 1948 and 1949 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

Note: Newfoundland data are included as of April, 1949. In the first five columns "unemployment assistance" for that Province is disregarded.

(1) Monthly data as of end of month while annual section is based on averages of month-end statistics.

(2) As of July 1949, due to changes in method of recording payments, the number of benefit payments (equivalent to the number of beneficiaries) in the week which includes the third Friday of the month, has been substituted for the number of persons receiving benefit in the month.

(3) Prior to 1944 data included deferred as well as current vacancies.

(1) Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

---

(1) As of April 1949, Newfoundland data are included.

(2) Annual computation to 1946 entails considerable adjustments in production and external trade as described on page 23 of the Coal Report for 1946.

Note: As of April 1949, Newfoundland is included.

(1) Total pulp production was revised where necessary to cover "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

(2) Totals include unspecified pulp.

---

(1) Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

(2) Excluding producers' interchange.

(3) Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

(4) Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

(1) The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(1)Figures cover the production of firms which normally account for 85 per cent of the total for Canada.

(2)Since January, 1949, includes concrete chimney blocks. (3)Prior to 1947 data on producers' sales were used to indicate production. Annual and monthly production for 1947, 1948 and 1949 are obtained by adjusting producers' sales for changes in inventories. (4)Includes Newfoundland as of May 1949.

---

(1) Includes Newfoundland as of May 1949.

(2) Hollow blocks including fireproofing and load-bearing tile. (3) Planks and boards.

(4) Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

1949-50(p)	59.1	316.6r	375.6r			29.0	120.4r	149.3r		

(1) Includes imports to the end of 1948-49 while in 1949-50 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

(2) Figures of customs exports from 1945-46 to 1947-48 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1948-49 are customs exports and will be adjusted when required information is available. (3) Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption. (4) Includes customs exports of Canadian oatmeal and rolled oats.

(1) Available for January, April and August only. 1948 and 1949 indexes are subject to revision.

(2) Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.

(3) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.

(4) Prior to 1941 prices were quoted on a live weight basis.

(5) Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada. Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies. Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments".

(1) Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transaction,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

(2) Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board.

(3) Does not include proceeds of 100 million dollar loan floated by the Government of Canada in the United States in August.

*See footnote of page 96.

Note: As of April 1949, the Trade of Canada includes that of Newfoundland.

[1] Before 1935 totals are overvalued due to the inclusion of U.K. excise taxes on imports of spirits from that country

---

(1) The annual statistics embrace all steam railways, while monthly data refer to railways with annual operatin revenues of $500,000 or over. (2) Operating income equals operating revenues less operating expens adjusted for tax accruals and rent of equipment and joint facilities. (3) For the Canadian National ar the Canadian Pacific, retroactive wage increases, totalling $29,035,087, paid in September 1948, were n included in that month's operating expenses. Payrolls as now reported monthly are according to t new wage scale.

Beginning in July 1949, certain advances that were formerly classified under "Miscellaneous Loans and Advances" are now included in the new category "Working Capital Advances to Crown Corporations". This account does not appear on the monthly statements. The data for the corresponding month of the previous fiscal year are comparable to those for the current year.

(1) Does not include advances to Foreign Exchange Control Board which are equivalent in substance to cash balances either in Canada or abroad, nor temporary investment of surplus cash in the Government's own securities. (2) Includes assumption of Newfoundland guaranteed stock of $71,709,459.

Note: Credit items are due to repayments and transfers between departments and classes of expenditure.
